10 colours for the metal parts

8 colours for plastic accessories

FRONT HANDLE

DRAWER CABINETS

New, flexible extension guide with mechanical adjustment of the drawer rear stop in 3 different positions.

VERTEBRATE BAR

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.

CYLINDER CLOSURE

TRANSMISSION SYSTEM FROM THE CLOSURE CYLINDER TO THE HEAD OF THE VERTEBRATE BAR WITH STEEL WIRE WITH ELASTIC SHEATH AND LINEAR MOVEMENT.

The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

PUSH TO OPEN- INDIVIDUAL DRAWER OPENING

Compared to traditional systems that require additional components on the front, the opening of individual drawers is a feature integrated in the cylinder. To open the drawers just press the lock cylinder. The fewer components in a given mechanism, the less likely the risk of breakdowns.

FLEXIBLE
EXTENSION
DRAWERS

FIXED AND ADJUSTABLE LEGS WITH WHEELS

The legs are made of sheet steel with holes at the top for fixing to the worktop and on the base plates for wheel mounting. They are available with a diameter of 125 mm and in a range of models suitable for any type of flooring. Height adjustable versions are also available, variable in height from 850 to 1250 mm through two 25 mm pitch extensions (adjustable by screw tightening). In the leg with swivel wheels a practical handle is provided for bench handling.

MULTI-PURPOSE-PANEL
