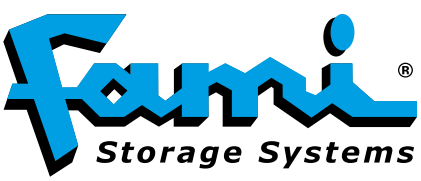
Fami® Storage Systems

GENERAL CATALOGUE

INNOVATION
SINCE 1929.



Storage Systems

www.famispa.com

Fami was founded as a specialist industrial furnishing manufacturer. Over the years, considerable resources and energy have been invested in growing our professional skills, establishing an impressive network of contacts and transforming research and materials into highly functional, innovative and top quality products. Fami is a solid business organization with a number of production divisions operating from a location of 230 thousand square meters, buildings of 95 thousand square meters and employs over 400 people. We have four subsidiaries abroad, in Germany, Poland, Austria, Switzerland. Our authorized distributor network covers every major country in the world. Every year we transform over eight million kilograms of iron and steel. The production is totally internal to the group with a division specialized in industrial furniture and one in the preparation of commercial vehicles.

ECOLOGY

Eco Sustainability and sustainable development are issues of great importance arising from the increased awareness that the changes and renewals that need to be accomplished should be done with respect to the environmental balance and above all that our resources are precious and need to be conserved for future generations. Fami S.r.l is constantly studying new technological innovations and is a forerunner in the industrial furniture manufacturing in implementing sustainable solutions. FAMI has installed a 1.4 mWp photovoltaic plant on the factory rooftops with a surface area of over 45.000sq meters. The systems consists of 6140 polycrystalline silicon panels known for their high quality, efficiency and longevity and guaranteed for 25 years. The photovoltaic system produces over 44% of the yearly electrical demand of the company.

BRAND

Store Van was founded in 2003 to respond to the very precise market of fitting out and customization of commercial vehicles. Store Van, with its dedicated design and production departments, is as innovative as Fami, whose philosophy and managerial approach it shares. Store Van operates all over Italy and Europe and has set its sights on continued expansion. As a brand of the Fami Group, the flexibility of its products is a source of pride within the industrial group and helps ensure its position as a solid partner for its customers. Increased production efficiency and high quality yield are of great important for all companies, and it is in this light that Store Van offers a range of accessories for the fitting out of a wide variety of commercial vehicles. Store Van studies, designs and manufactures the products and fits out all the interior spaces, making use of innovative accessories specially made to measure for all types of vehicles.

WHAT WE USE

METAL

Originally processed with rudimentary hand tools, over time it began to be cut, shaped and assembled by the brute force of the first presses, but now, with the advent of electronics, it undergoes innovative production processes during which the metal is shaped, drilled, assembled and coated to deliver exclusive products. Thanks to the use of industrialized manufacturing processes, state-of-the-art technologies and the staff's peerless professional expertise, Fami's plants take in the raw material and turn out the finished, high-performance object the customer expects from us.

WOOD

Wood has always been a living material, and as such, it must be handled with great care during processing. In-depth knowledge is required to choose the correct cutting direction, the right equipment to shape it, and the appropriate coatings to make the most of all its characteristics. The types of timber used are of the highest quality: beech, a very hard, tough wood, is ideal for contact with metal parts while birch, exceptionally strong for its weight, is used for van interiors.

PRODUCTION PROCESSES

METAL

Making full use of the possibilities of leading-edge technology, both automation and production management and focusing above all on the dynamics of "best practice" are the key resources of a successful company. The metal division has all the equipment needed to transform a plain sheet of metal into a finished, functioning item: Automatic processing lines, robotic assembly systems and automatic coating plants are just some of the tools available to the Fami production group. The key to this success is the skilled staff, drive the company forward developing better and more efficient metal working solutions. They are the essential power house that accelerates our growth.

WOOD

Woodworking is also highly mechanized, using a numerically controlled machining center which processes the piece to obtain the component required in a series of programmed operations. The wood is moved to the processing line presses, where robots pick it up and load it into the machines for processing, while other robots automatically change the tools needed for the insertion of threaded inserts, the drilling of locator holes and shaping.

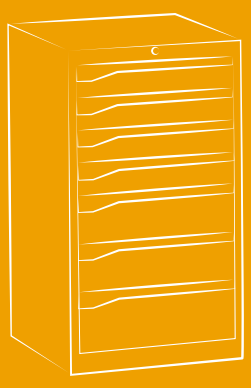
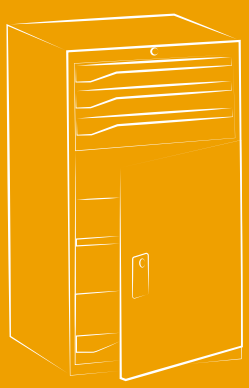
THE CABINET THAT CHANGES CABINETS





MASTER

CABINET MASTER

The idea was born in 2009: to reinvent the concept of the cabinet. To reinvent something you have to reinvent yourself. Fami has rethought its own Research & Development department with six new minds, mechanical and electronic engineers specialized in automation and project industrialization.

Drawer cabinet is designed to satisfy and adapt to customer needs. A product featuring unrivalled accuracy in production processes. A perfect combination of technology and functionality aimed at optimising workflows.

VERTEBRATE BAR

THE SYSTEM'S HEART AND BRAINS

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity.
The lighter the workload, the longer the component life.
The bar has 25 mm pitch holes - allowing for a number of closure heads to be fitted. This allows access to drawers to be split into multiple groups. The division into groups is configurable in height.

PATENTED

MECHANICAL SYSTEM
LOCK CYLINDER

Transmission system from the lock cylinder to the head of the vertebrate bar with steel wire, with elastic sheath and linear movement.
The cylinder lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

PUSH TO OPEN- INDIVIDUAL DRAWER OPENING

Compared to traditional systems that require additional components on the front, the opening of drawers is a feature integrated in the cylinder. To open the drawers, it is enough to turn the key and press the lock cylinder. The fewer components in a given mechanism, the less likely the risk of breakdowns.

PATENTED

syCONTROL

Mechanical or electronic lock providing high anti-tamper protection.

ELECTRONIC SYSTEM

The numerical code lock controls the opening and closing of the vertebrate bar and of the door. It can manage up to 10 users with 3 to 8 digits numerical codes. The event history can be downloaded by connecting the keypad to the PC with a cable. Up to 10 remote controls are available on request.

EVENT CONTROL SOFTWARE

Free reporting software downloadable from:
www.sylogik.com/sycontrol.
Latest 1000 events displayed with date, time, user and event type.
To be able to always control every opening and every access.

FREEDOM TO CONFIGURATE

FLEXIBLE EXTRACTION

New, simple extension guide with mechanical adjustment of the drawer rear stop in 3 different positions. It allows 3 different capacities to be obtained: 50, 75, 100 kg. A new telescopic guide can be mounted on the drawer.

syFLEX

Patented opening system allowing the user to customise extension and load capacity.

PATENTED

	kg
92%	100
96%	75
100%	50

TELESCOPIC EXTRACTION

New extraction guide (extraction 100%) that guarantees load capacity of 200 kg in 10 dimensions.

Drawers/retractable shelves of Master series can mount independently both flexible and telescopic extraction rails.

WEB TO PRINT

SYLOGIK smart solutions

The drawer front becomes a real visual interface.

- Customisable with design and decorative elements
- User Inputs: Labels for content description and classification
- User Outputs: Possibility of adding visual or descriptive messages on the handle

syFRONT

Free Web to Print service for customising the labels to be affixed to the handle of the cabinet.

www.sylogik.com/syfront

Customises A & B

A = WHEEL LOAD CAPACITY

To calculate the capacity of the cabinet with wheels made of standard rubber, non-marking rubber and nylon with Ø 100 mm, apply the formula: (Ax3) - 55 kg. The capacity of the cabinet with wheels made of standard rubber, polyurethane and nylon with Ø 125 mm is 400 kg

18x27 EH

To calculate the capacity of the cabinet with wheels made of standard rubber, non-marking rubber and nylon with Ø 100 mm, apply the formula: (Ax3) - 65 kg. The capacity of the cabinet with wheels made of standard rubber, polyurethane and nylon with Ø 125 mm is 400 kg

27x27 EH

To calculate the cabinet capacity, apply the formula: (Ax3) - 120 kg
WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg

36x27 EH

To calculate the cabinet capacity, apply the formula: (Ax3) - 170 kg
WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg

54x27 EH

To calculate the cabinet capacity, apply the formula: (Ax3) - 65 kg
WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg

27x36 EH

A = WHEEL LOAD CAPACITY

36x36 EH	To calculate the cabinet capacity, apply the formula: (Ax3) - 140 kg WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg
45x36 EH	To calculate the cabinet capacity, apply the formula: (Ax3) - 160 kg WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg
54x36 EH	To calculate the cabinet capacity, apply the formula: (Ax3) - 180 kg WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg
64x36 EH	To calculate the cabinet capacity, apply the formula: (Ax3) - 200 kg WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg
78x36 EH	To calculate the cabinet capacity, apply the formula: (Ax3) - 220 kg WARNING: for safety reasons, the capacity of the cabinet with wheels may not exceed 600 kg

VERTEBRATE BAR

The vertebrate bar is composed of an extruded aluminum profile spaced at a 25 mm interval to allow the insertion of a spring to prevent tipping the cabinet. The anti-tilt rod comes complete with plastic accessories and the upper structure designed for use with either the cylinder lock or the electronic lock.

VERTEBRATE BAR

The vertebrate bar is composed of an extruded aluminum profile spaced at a 25 mm interval to allow the insertion of a spring to prevent tipping the cabinet. The anti-tilt rod comes complete with plastic accessories and the upper structure designed for use with either the cylinder lock or the electronic lock.

STANDARD

TECHNICAL SPECIFICATIONS

1

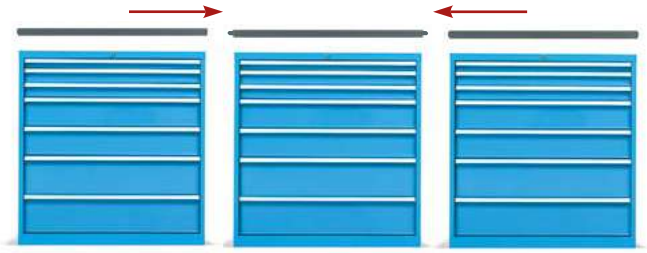
DETAIL OF THE BEARING

The drawers and the full (telescopic) extension shelves are supplied in two versions:
- **normal extension** equal to 87% with load capacities ranging from 60 to 100 Kg depending on the version. The drawers are supplied with 4 high-resistant bearings to constantly ensure smooth sliding.
- 100% full **telescopic extension** with load capacities ranging from 150 to 200 Kg depending on the version. The drawers are supplied with 8 high-resistant bearings to constantly ensure smooth sliding.

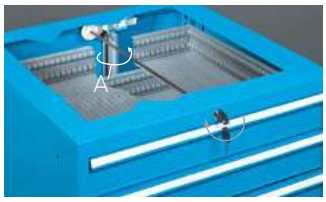
2

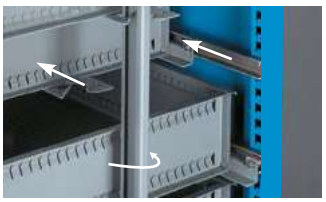
A MDF worktop with oil-resistant rubber covering can be applied to the STANDARD series cabinets. This worktop is supplied with the same dimensions of the cabinet and can be easily joined to other worktops to create a single surface. (see example)

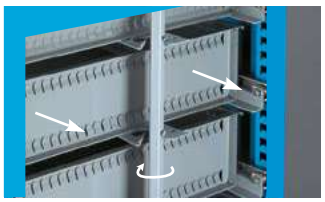
MDF SHELF APPLICATION



3







The locking system also prevents the workstation from tilting when a drawer or shelf is pulled out. The rear hook of the drawer or shelf, in fact, turns the rear bar (A) to its closed position. This makes it impossible for the operator to pull out other drawers or shelves at the same time, thereby preventing too much weight being transferred externally. Once the drawer is closed again, the rod returns to the opening position thereby allowing another drawer to be opened.

CYLINDER LOCK

Supplied standard with cylinder lock and two keys.

THE FULL EXTENSION DRAWER REVOLUTION

FLEXA

TECHNICAL SPECIFICATIONS

1

Drawers and extensible shelves are supplied as standard with 100% total extensibility on high-strength ball bearings. The perforated bottom and the slotted walls with 17 mm pitch allow for easy insertion and fastening (through screws) of the metal partitions.

2 The doors are pre-set to be installed with either right-hand or left-hand opening. The cabinets are supplied with a cylinder lock complete with two keys. When the cabinet is provided with a door, both the cabinet lock and the door lock are provided with the same keys. In this way, only one key can be used for the cabinet.

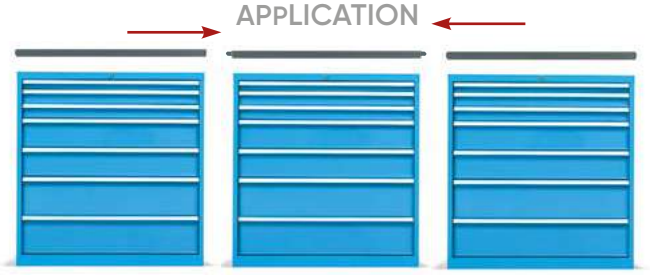
3

CYLINDER LOCK

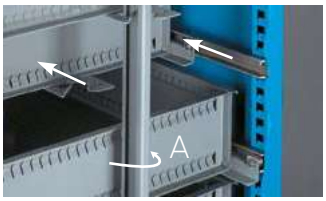
Supplied standard with cylinder lock and two keys.

4 FLEXA series cabinets can be fitted with a top shelf, consisting of an MDF top lined with a steel sheet covered with oil-proof rubber. Supplied in the same dimensions as the cabinets, these tops can be easily joined together to create a seamless surface (see example).

MDF SHELF APPLICATION



The cabinets can be fitted with a wide range of electrical and pneumatic systems complete with electric rollers, various types of outlets and voltage ratings, differential cutoff switches, winding units and compressed air fixed connectors. AVAILABLE ON REQUEST.



The closing bar also acts as an anti-tilt system when the drawer is extended. The drawer rear hook causes the bar (A) to rotate to its closed position. This prevents the operator from simultaneously opening multiple drawers, avoiding a dangerous weight shift to the outside.

Two types of handle can be fitted on FLEXA series cabinets. The pair of handles is applied to the 4-edge shelf, both frontally and laterally, and can also be turned downwards to reduce the trolley height by 38 mm (A).
The single handle is applied to the cabinet side. This solution allows other types of cover to be fitted on the cabinet - such as multiplex shelves (B), available on request.

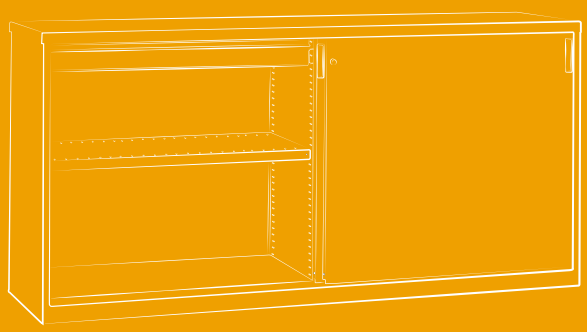
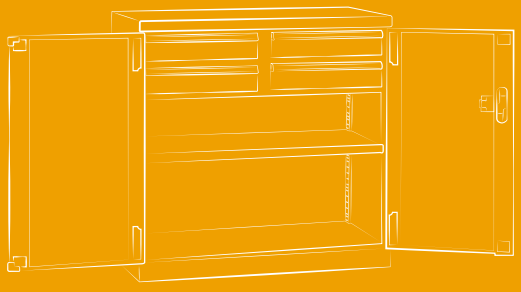
CABINETS WITH HINGED OR SLIDING DOORS,

MADE OF STURDY STEEL PLATE





PERFOM

TECHNICAL SPECIFICATIONS

The cabinets with hinged doors, sliding doors or shutters are made of specially shaped, sturdy sheet steel - reinforced to withstand the heaviest loads. They have been designed and manufactured in different sizes to deal with a whole range of storage requirements. These cabinets can be equipped with drawers or adjustable shelves. The drawers have a front height of 100 mm and run on normal or telescopic guides.

HINGED DOORS

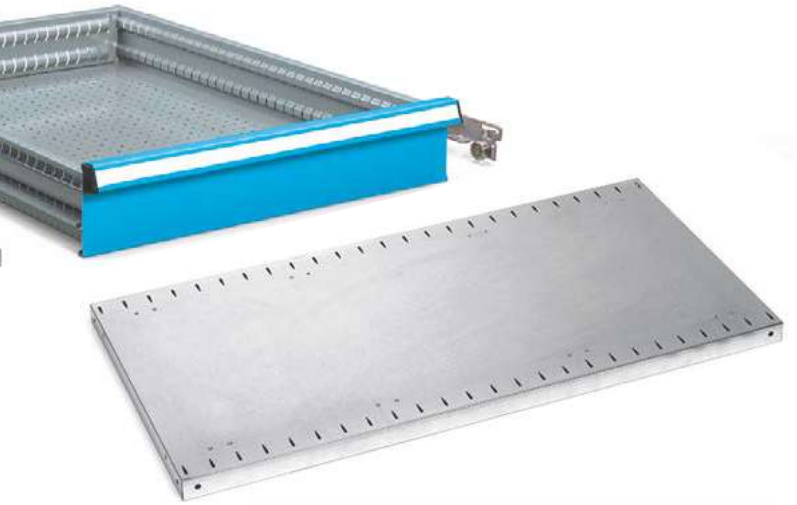
The hinged doors are available in solid metal sheet, with perforated panels for the application of containers/tool hooks or in transparent polycarbonate, for greater visibility and a tidier arrangement of the contained items. The 3-point closure ensures high security against break-ins.

SLIDING DOORS

The hinged doors are available in solid metal sheet or in transparent polycarbonate, for greater visibility and a tidier arrangement of the contained items. Ideally suitable for storing materials in confined spaces, as they do not protrude out of the cabinet's footprint when opened.

SHUTTER

The shutter doors are made of grey plastic material with a steel sheet handle and an integrated cylinder lock. Ideal for small spaces, whenever it is not possible to use hinged doors.



SHELVES AND DRAWERS

Galvanised steel sheet shelves, 30 mm thick, adjustable in height in steps of 25 mm, capacity 100/180 kg. Plain or telescopic extension drawers, adjustable in height with capacities from 50 to 100 kg.

ACCESSORIES

Partitioning material for drawers/shelves and plastic bins/boxes/containers, they help optimise the available space and keep the cabinet tidy.

CHANGING ROOM LOCKERS

1

A.

B.

FAMI changing rooms lockers can be supplied with a horizontal roof (A) or a sloping roof (B). The sloping roof is easier to clean and is recommended in environments with very demanding hygiene requirements.

2 The doors are supplied with a handy adhesive hanger.

3 Locker compartments can be of three different widths (300 mm, 400 mm, 585 mm) while their depth is 500 mm. The compartments are always equipped with a galvanised support shelf which, in some configurations, can be adjusted in height to accommodate a helmet. The part below the shelf can be supplied with a middle partition, suitable for dividing the dirty/clean garment areas.

4 The doors can be supplied with a cylinder lock with two keys or with a padlockable door knob (lock not included).

CYLINDER LOCK

5

The doors are supplied with a name tag holder for personal identification. Both the doors and the rear wall have a number of openings to facilitate air circulation.

6

Among the accessories, some are designed to avoid contact with the floor including: polypropylene feet (highly resistant to contact with water), galvanized steel baseboards, single-sided and two-sided benches, shoe stands.

LOCKERS WITH COMPARTMENTS

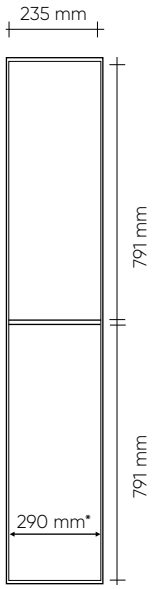
-The lockers with internal compartments, suitable for keeping both clothes and personal items, can be used in various industries and service segments, as well as in sports and recreational activity centres.
The doors are supplied with a name tag holder for personal identification and will close flush with the locker body. Both the doors and the rear wall have a number of slots to help air circulation.

Among the accessories, some are designed to avoid contact with the floor, including: polypropylene feet (highly resistant to contact with water), galvanized steel baseboards, single-sided and two-sided benches, shoe stands.

The doors can be supplied with a cylinder lock with two keys or with a padlockable door knob (lock not included).

CYLINDER LOCK

The cylinder closure is supplied as standard in lockers.



*Internal available space

PC CABINETS

Door with security lock and polycarbonate glass. Useful dimensions: 660x525 mm H.

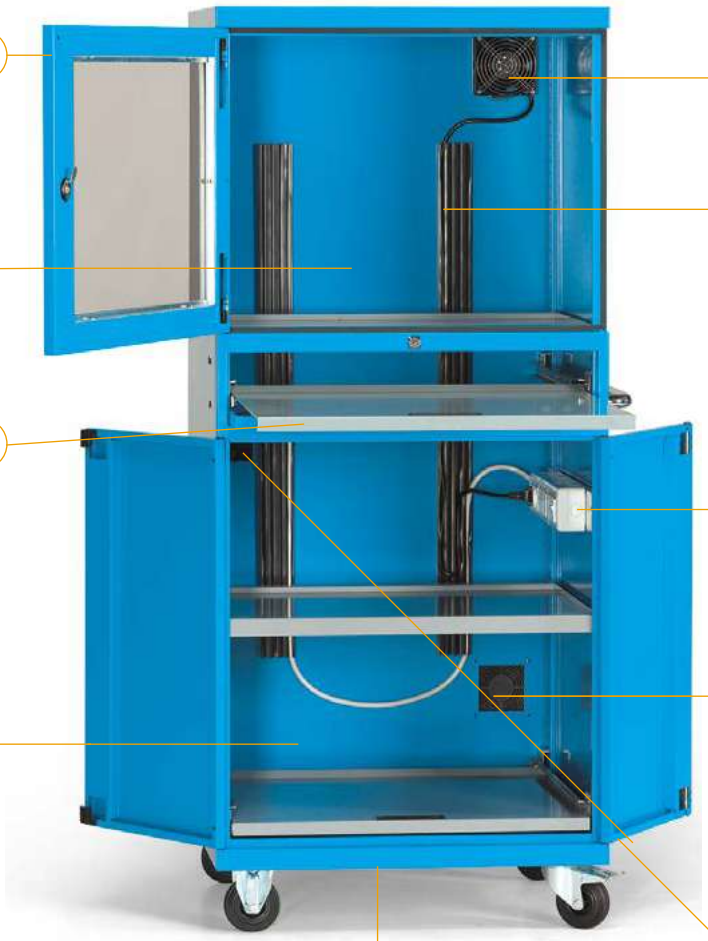
1

Suitable for monitor sizes up to 21". Internal dimensions of upper compartment: 690x600x580 mm H.

Retractable keyboard shelf. Useful dimensions: 620x510 mm H.

2

The lower compartment can be fitted with retactable and height adjustable shelves for housing hardware systems and printers. Internal dimensions: 690x600x720 mm H.



Cooling fan with dust filter.

4-channel cable duct.

3

5-socket electrical system with circuit breaker.

Air inlet hole with dust filter.

4

Inlet hole for network cables and outlet hole for power cable.

-Room temperature for use -5/+40 °C with umidity up to 50%

-Room temperature for use -5/+20 °C with umidity up to 90%

1 The lifting design door lock (fig. A) simultaneously closes or opens the pair of doors (fig. B)

2 The keyboard top can be locked in two opening positions and thanks to its large size, it can accommodate all the required items.
The cabinet is supplied with standard equipment including 1 mouse pad, 2 ground fixing brackets and 2 levelling units

3 The electrical system of each cabinet, with protection class IP 30, comes with a standard 230V 10A cutoff switch and is factory-tested according to the standard CEI EN 60204-1 for:
- equipotential protection circuit continuity
- applied voltage
- insulation resistance

4 By loosening the specially provided cable gland, you can adjust the external length of the power cord. The electric power cable is a dual protection item with a length of 3 metres

CABINET WITH OR WITHOUT SOCKETS

Cabinet capacity: 400 kg
Adjustable shelf capacity: 100 kg
Extensible shelf capacity: 50 kg

CABINET WITH NYLON WHEELS Ø100 mm

Cabinet capacity: 290 kg
Adjustable shelf capacity: 100 kg
Extensible shelf capacity: 25 kg*

*Attention: the load capacity may be increased by 100% if the cabinet already contains a 50 kg load.

TECHNICAL SPECIFICATION

STANDARD MODULE

Safety locks for the drawer and the pair of hinged doors. Dimensions (mm): 791x598x1081 H.

Through hole for monitor or laptop power supply cable.

Electrical system with 4/5 outlets and with cutoff switch.

Compartment with option to add pull-out shelves and height-adjustable shelves, to accommodate hardware equipment and printers.
Usable Width: 663 mm
Usable height: 754 mm

2 fixed wheels and 2 swivel castors with ø 100 mm nylon brake

REAR VIEW

Air inlet hole with dust filter or cooling fan

Through hole for network cables and outlet hole for the electrical wiring system cable

DOOR MODULE

Security lock and polycarbonate glass.
Working dimensions: 655x215x465 mm H.

Possible addition of a monitor up to 27".
Inside dimensions of the top compartment: 710x215x530 mm H.

SHUTTER MODULE

Ideal for touch screens.
Usable dimensions: 710x215x530 mm H.

Security lock and plastic shutter with ergonomic handle

Extensible drawer with keyboard shelf
2 opening locking positions rear space for item storage

Usable dimensions: 655x465 mm H

THE MODULES WITH **DOOR** AND **SHUTTER** ARE DESIGNED TO LET THE MONITOR POWER CABLE THROUGH BY PROVIDING A GAP BETWEEN THE SUPPORT SHELF AND THE REAR WALL.

PERFORATED PANEL MODULE
WITH 3 EDGE TOP COVERED IN PVC

Made of sheet steel with holes for tool/Practibox hooks

ENVIRONMENT

ENVIRONMENT- FRIENDLY DRUM AND TANK SUPPORTS

Ecological spill containment pallets compliant with current environmental protection legislation, such as that covering the safe management of situations at risk and the protection of the soil, ground and aquifers. To prevent accidental fluid spills in the event of leaks or failures, the removable grating on which the drums stand allows the contents to flow into the containment tank below. The bottom is shaped to allow handling using a forklift or pallet trolley. These spill containment pallets must be placed on flat, protected surfaces in the event of weather conditions which may interfere with their normal operation.

PRACTICAL AND SAFE OIL STORAGE CABINET

MASTER FO

TECHNICAL SPECIFICATION

Designed for recovering and storing oil cans, our oil storage cabinets, complete with hinged doors, are a practical solution to organise liquids products.
The liquid collection tanks are designed to be watertight and resistant to corrosion in both the galvanised and the painted versions. Available in different configurations with telescopic extension shelves with 200 kg capacity or fixed, height adjustable shelves.

HINGED DOORS

Hinged doors are made of sturdy, specially shaped steel sheet, with a footprint depth of 25 mm. The 3-point closure ensures high security against break-ins. Available with cylinder locks with two keys.

OIL RECOVERY TANK

The collection tank is made of galvanised sheet steel with a 10/10 thickness and is watertight; it is used to collect any dripping at the end of oil drawing or in case of can breaks. It runs on "L" shaped guides fixed to the uprights on the sides of the cabinet.

EXTERNAL OIL TANK

The external oil safety tank has a capacity of 77 litres and it is watertight. It raises the cabinet off the floor by 150 mm and is the most complete, safest solution in case of oil can breaks and multiple oil leaks.

SHELVES

- Steel sheet shelves, total height 60 mm, adjustable in height in steps of 25 mm, capacity 150 kg.

- Telescopic retractable shelves, with a capacity of 200 kg, with an internal galvanised steel sheet surface with a drain to preserve the painted bottom.

NC COMBI – PERFOM

TECHNICAL SPECIFICATIONS

Organisation, protection, safety and handling for NC tools: NC Combi trolleys and NC Perfom cabinets, available in a number of different solutions, adequately respond to the logistic requirements of CNC centers.

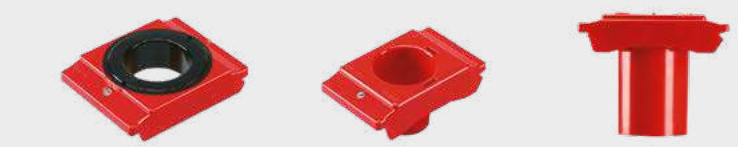
COLOURS

4 colours for the metal part

RAL 7000 | RAL 6011 | RAL 5012 | RAL 7035

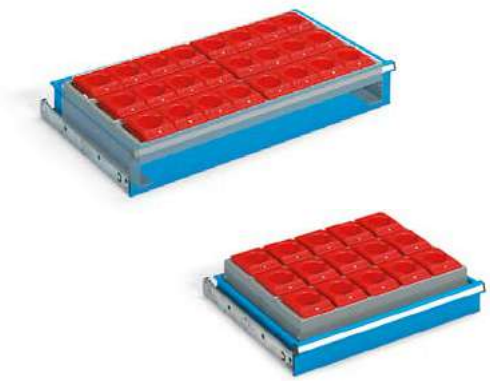
TOOL HOLDERS

Made of ABS, resistant to impacts and mineral oils, they are fixed to the frame with screws to improve solidity during spindle handling. Available in different versions to accommodate a wide range of commercially available tools.



FRAMES

The tool holder frames are fully welded and can be placed inside drawers, with height adjustment supports, or installed inside the cabinets or trolleys in a hanging arrangement. The lateral and central supports that make up the rows are polished and allow the bushes to be positioned at any point on the frame.



DRAWERS

Drawers are supplied with 87% plain extensibility and 100% telescopic extensibility on high-strength ball bearings. They are suitable for accommodating tool holder frames by means of a pair of supports to be fixed on the perforated bottom.

The frames are adjustable in height and can be installed horizontally/at an angle.

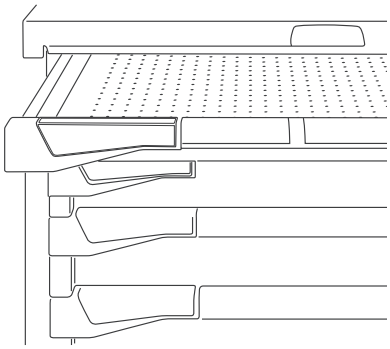
NC MASTER

TECHNICAL SPECIFICATIONS

Organisation, protection and safety for NC tools: our Master cabinets, with their wide range of accessories, are ideal candidates as modern logistics resources for NC centres. Available in 4 series, different by width and depth, NC Master cabinets are versatile in any work environment, adequately responding to the progressively evolving requirements of client companies.

COLOURS

CABINET

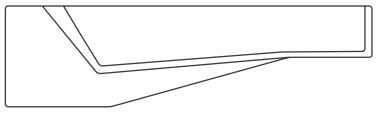


10 colours for the metal part

RAL 7000	RAL 6011	RAL 3003	RAL 9010	RAL 5019
RAL 7016	RAL 5012	RAL 7035	RAL 5010	RAL 9002

8 colours for plastic accessories

DARK GREY	MEDITERRANEAN BLUE	SKY BLUE	GLAMOUR RED
RED CARPET	JUICY ORANGE	SUNNY YELLOW	FOREST GREEN



FRONT HANDLE

TOOL HOLDERS

Made of ABS, resistant to impacts and mineral oils, they are fixed to the frame with screws to improve solidity during spindle handling. Available in different versions to accommodate a wide range of commercially available tools.

FRAMES

The tool holder frames are fully welded and can be placed inside drawers, with height adjustment supports, or installed inside the cabinets or trolleys in a hanging arrangement. The lateral and central supports that make up the rows are polished and allow the tool holders to be positioned at any point on the frame.

EXTENSIBLE DRAWERS AND SHELVES

The extensible drawers/shelves of the NC Master series can be independently fitted with both flexible and telescopic extension guides.

FLEXIBLE EXTENSION

New, flexible extension guide with mechanical adjustment of the extensible drawer/shelf rear stop in 3 different positions. It allows 3 different capacities to be obtained: 50, 75, 100 kg.

syFLEX

Patented opening system allowing the user to customise extension and load capacity.

TELESCOPIC EXTENSION

New telescopic extension guide (100% extensibility) guaranteeing a capacity of 200 kg in the 4 different NC Master series.

92% = 100 kg
96% = 75 kg
100% = 50 kg

VERTEBRATE BAR

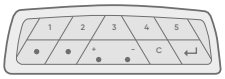
The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.

CYLINDER CLOSURE

Transmission system from the closure cylinder to the head of the vertebrate bar dy means of steel wire, with elastic sheath and linear movement.
The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

LOCK WITH DIGITAL CODE



In addition to the standard cylinder closure, Fami decided to add a CODE lock to its closures. The numerical code lock controls the opening and closing of the vertebrate bar. It can manage up to 10 users with 3 to 8 digits numerical codes. The event history can be downloaded by connecting the keypad to the PC with a cable. Up to 10 remote controls are available on request.

HEIGHT ADJUSTABLE SHELF

REDUCED DISTANCES

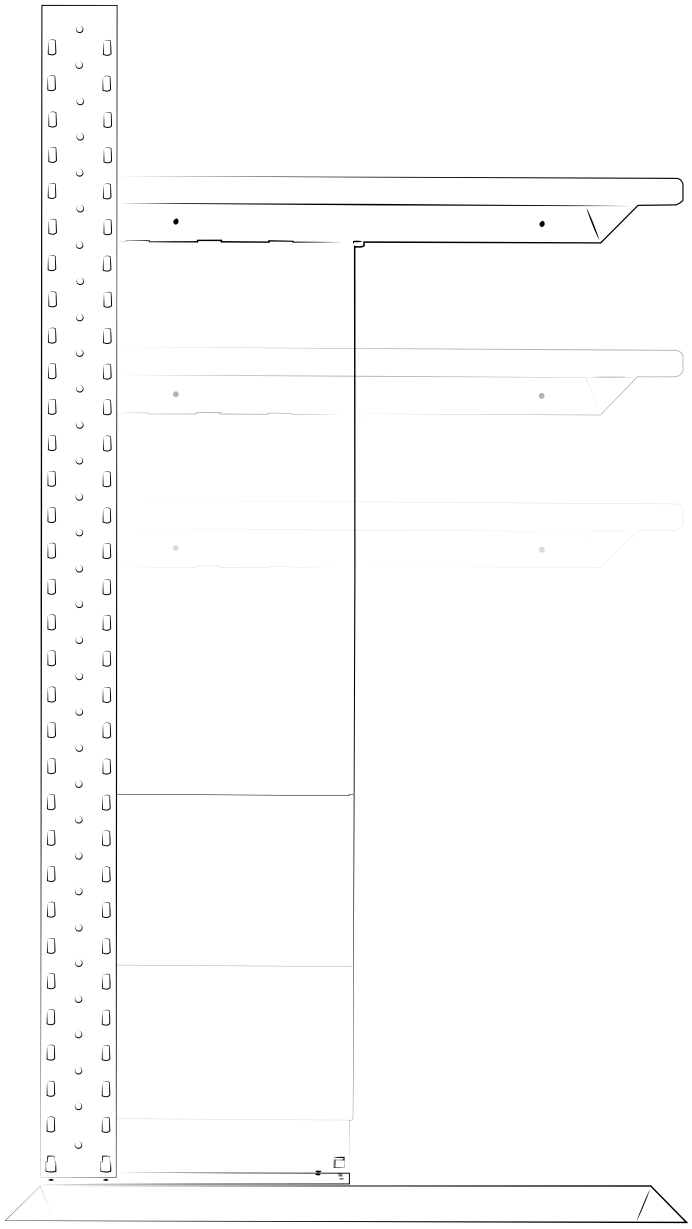
LARGER FIELD OF VIEW

DYNAMIC

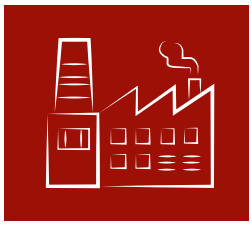
The dynamic and ergonomic design of Dynamic workstations lends itself to a variety of work environments, mainly in the mechanical engineering, electronics, assembly and test laboratory industries. Their highly modular nature allows solutions to be designed, implemented and developed in step with the changing needs of the operators over time. Each solution, in terms of size and composition, is the result of a combination between maximised objective operational functionality and a dynamic and modern presentation. Numerous details are specifically aimed at user comfort, like the height-adjustable worktop, that optimises freedom of movement, enhancing performance and productivity. Wide range of accessories suitable for retrofitting.

ERGONOMIC

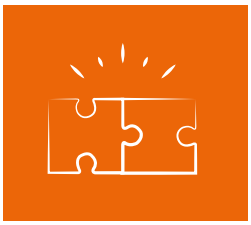
! ALL INDICATED LOAD CAPACITY VALUES ARE NET AND REFER TO EVENLY DISTRIBUTED WEIGHTS



METALWORKING

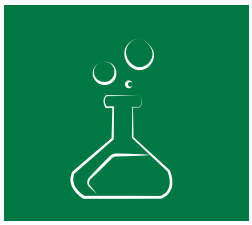


ASSEMBLY



QUALITY CONTROL

LABORATORY



The height adjustable floor is ideal for dynamic work environments such as assembly, repairing, research and quality control facilities.

HEIGHT ADJUSTABLE

The configuration of the Dynamic workstations, especially if equipped with Smart series trolleys, improves visibility and gripping of the materials and equipment stored in the plastic boxes and on the shelves.

EVERYTHING IS CLEARLY VISIBLE

Each workstation is completely customisable with the addition of a wide range of accessories and with a new, colourful line of shelves and panels, available in 10 different shades.

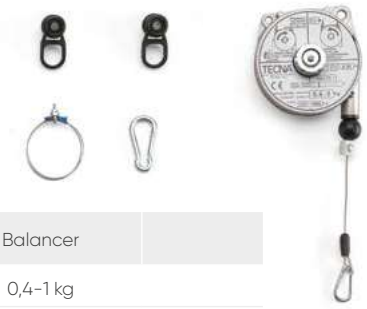
SUPPORT RUNNERS

ART.	
R CMV 0034 00	

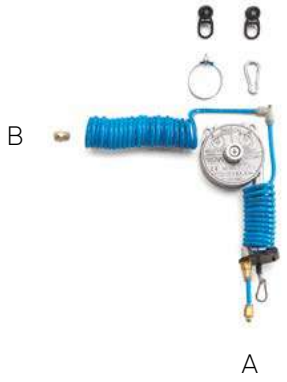
The support runner is made up of 1 black plastic ring complete with bearings and 1 steel snap hook



BALANCER SET

ART.	Balancer	
F BL 9710 00 00	0,4-1 kg	
F BL 9720 00 00	1-2 kg	

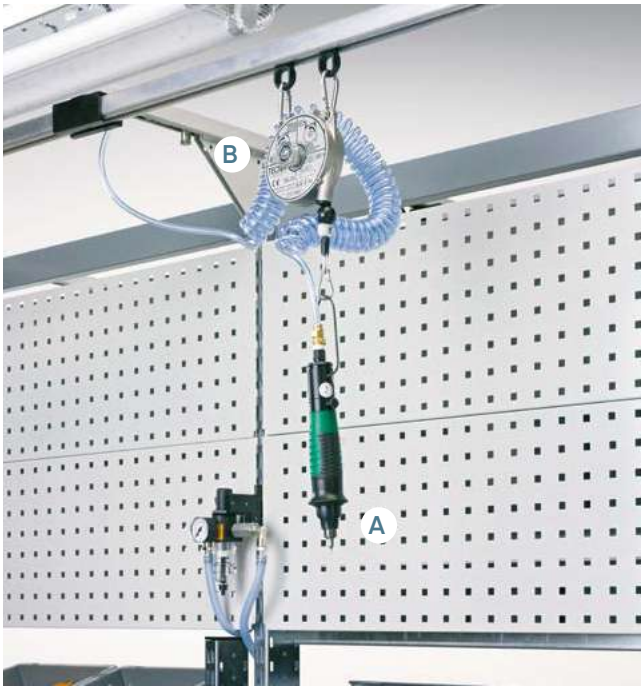
The set includes: 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable

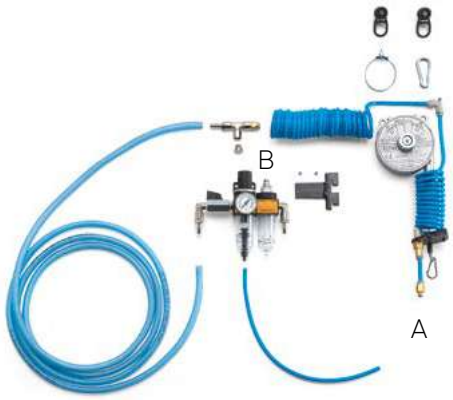


ADDITIONAL COMPRESSED AIR SET WITH BALANCER

ART.	Balancer	
F BL 9710 02 00	0,4-1 kg	
F BL 9720 02 00	1-2 kg	

The set includes: 1 coupling 1/4" (B), 2 retainers, 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable, 1 universal tool coupling (A), 1 spiral tube internal diameter 5.5 mm





COMPRESSED AIR SET WITH BALANCER AND FILTER

ART.	Balancer	
F BL 9710 03 00	0,4-1 kg	
F BL 9720 03 00	1-2 kg	

The set includes: 1 flexible cable Ø 10 mm, 1 T-shaped connector 1/4" with cap (B), 2 retainers, 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable, 1 universal tool coupling 1/4" (A), 1 spiral tube internal diameter 5.5 mm, 1 filter regulator unit with pressure gauge* which can be used at a maximum pressure of 10 bar, it has a capacity of about 9 litres per second (at point A) and 11 litres per second (at point B) at an operating pressure of 6.3 bar (the capacity can vary according to the technical characteristics of the compressed air supply to which the Fami system is connected). 1/4" unions, 1 tube internal diameter 5.5 mm to drain the filter.

* Filter regulator unit with pressure gauge and oiler on request

96% = 75 Kg
100% = 50 Kg

MULTI-PURPOSE-PANEL

CAN BE ADDED ON REQUEST
TO COMPLETE YOUR WORK BENCH

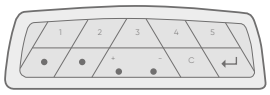
FLEXIBLE EXTENSION DRAWERS

CYLINDER CLOSURE

Transmission system from the cylinder to the head of the vertebrate bar by means of steel wire, with elastic sheath and linear movement.
The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

LOCK WITH DIGITAL CODE



In addition to the standard cylinder closure system, Fami has decided to add a digital code locking system (it can handle up to 10 users with 3 to 8 digit codes), which controls the opening and closing of the vertebrate bar. The event history can be downloaded by connecting the keypad to the PC with a cable. Up to 10 remote controls are available on request.

VERTEBRATE BAR

THE SYSTEM'S HEART AND BRAINS

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.

ART.	H cabinet mm
F BL 9670 70 07	700
F BL 9670 80 07	800

THE PNEUMATIC SYSTEM INCLUDES:

- 1 fix rear inlet with Ø 10 mm hose and connector (1/4") with pin (Ø 9–12 mm) used to link up to the pneumatic supply by means of an extension hose (not supplied standard).
- 1 front winder including 4 metres of hose with an internal diameter of 5,5 and a 1/4" threaded tool connector, capacity approx. 9 litres per second*.
- 1 fixed front outlet with Ø 10 mm hose and 1/4" threaded connector complete with plug, capacity approx. 11 litres per second*.
- 1 filter reducer assembly with pressure gauge which can be used at maximum pressure of 10 bar, capacity approx. 11 metres per second* at an operating pressure of 6.3 bar. *capacity can vary according to the technical characteristics of the pneumatic supply to which the system is connected.

PNEUMATIC SYSTEM WITH SINGLE WINDER

The bench legs for power fittings are supplied standard with a side door with a cylinder lock and 2 keys. An electric and/or a pneumatic system can be fitted in these bench legs. The socket box is also fitted standard with a thermo-magnetic switch 2P 230V AC 10A and is connected (with a hard-wearing cable sheath) to a heavy duty socket 220-240V 16A 2P+E at the rear featuring a vertically sliding cover. The system is protected to IP30.

THE ELECTRIC SYSTEM INCLUDES A MULTIPLE SOCKET BOX FEATURING 6 TYPE OF SOCKETS:

- 4 sockets for large and small italian plugs 220-250V 10A 2P+E
- 4 Schuko sockets 220-250V 10A 2P+E
- 4 French sockets 220-250V 10A 2P+E

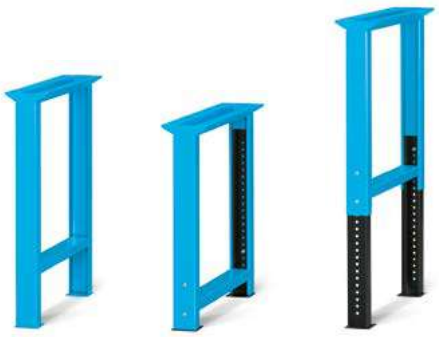
BEARING DETAIL

DRAWER CABINETS

Drawers are supplied with 87% plain extensibility on high-strength ball bearings. The perforated bottom and the slotted walls with 17 mm pitch allow for easy insertion and fastening (through screws) of the metal partitions.

87% = 70 kg

FRONT HEIGHT 50 mm
87% = 50 kg

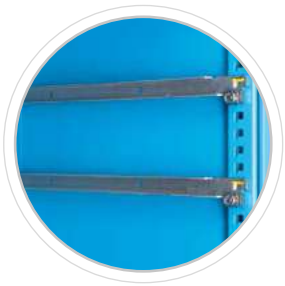


FIXED AND ADJUSTABLE LEGS

The legs are made of sheet steel with holes on the top for fixing to the worktop and on the base plates for floor fixing. They are produced in 3 different heights (700-800-850 mm) and a version is available adjustable in height from 750 to 1100 mm through two 25 mm pitch extensions (adjustable by screw tightening).

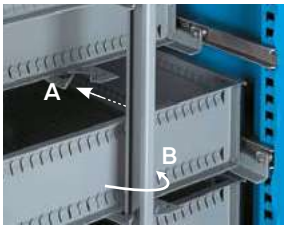
MULTI-PURPOSE-PANEL

CAN BE ADDED ON REQUEST
TO COMPLETE YOUR WORK BENCH



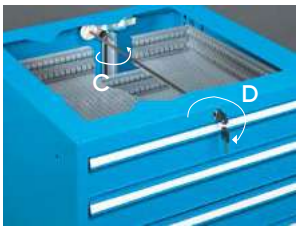
The walls are provided with 4 perforated uprights so that drawer guides or extensible shelves can be inserted.

ANTI-TILT ROD



The closing bar acts as an anti-tilt system when the drawer is extended. The drawer rear hook (A) causes the rear bar (B) to rotate to its closed position. This prevents the operator from simultaneously opening multiple drawers, avoiding a dangerous weight shift to the outside.

CYLINDER CLOSURE



The cylinder closure is connected via a square section rod (C) to the rear closing assembly, consisting of a rotating element and of the anti-tilt bar. Turning the key (D) operates the cam system in the closure assembly that rotates the rod.

SUPPLIED AS STANDARD WITH 2 KEYS

HEIGHT-ADJUSTABLE ADD-ON SHELVES FOR CHESTS OF DRAWERS

Height adjustable shelves can be inserted inside chests of drawers with a capacity of 150 kg.

In addition to the adjustable shelves, extensible shelves on ball bearings can be inserted with a capacity of 100 kg.

The bench legs for power fittings are supplied standard with a side door with a cylinder lock and 2 keys. An electric and/or a pneumatic system can be fitted in these bench legs. The socket box is also fitted standard with a thermo-magnetic switch 2P 230V AC 10A and is connected (with a hard-wearing cable sheath) to a heavy duty socket 220-240V 16A 2P+E at the rear featuring a vertically sliding cover. The system is protected to IP30.

THE ELECTRIC SYSTEM INCLUDES A MULTIPLE SOCKET BOX FEATURING 6 TYPE OF SOCKETS::

- 4 sockets for large and small italian plugs 220-250V 10A 2P+E
- 4 Schuko sockets 220-250V 10A 2P+E
- 4 French sockets 220-250V 10A 2P+E
- 3 British sockets 220-250V 10A 2P+E
- 4 Swiss sockets 220-250V 10A 2P+E
- 4 Israeli sockets 220-250V 10A 2P+E

DRAWER CABINETS

The drawers and the door are supplied with cylinder locks with 2 keys. The drawer, with high resistance sliding nylon bearings, is fitted with a stop to prevent it from accidentally falling during opening. Available in 3 different configurations.

STRUCTURE

The structure, made of sturdy steel sheet, is composed of legs, upper bars and lower shelf with a load capacity of 250 kg, assembled together with screws in order to guarantee a load capacity of 1000 kg.

MULTI-PURPOSE-PANEL

CAN BE ADDED ON REQUEST
TO COMPLETE YOUR WORK BENCH

ACCESSORIES

The benches are designed for side and rear walls and middle shelves, height adjustable, slotted or not slotted, and suitable for addition at any time.
The slotted design allows for the insertion of **RK BOX** series plastic containers and guides, with the advantage of being able to create a small storage area for hardware parts, components and spare parts ready on the bench.

BEARING DETAIL

DRAWER CABINETS

Drawers are supplied with 100% plain extensibility on high-strength ball bearings. The perforated bottom and the slotted walls with 17 mm pitch allow for easy insertion and fastening (through screws) of the metal partitions.
The available front heights are as follows:
50 / 75 / 100 / 125 / 150 / 200/ 250 / 300 mm

100% = 70 kg

FRONT HEIGHT 50 mm
100% = 50 kg

SIDE PANELS

Each side panel of a bench is fitted with two 25 mm pitch drilled uprights to allow for drawer guides to be inserted and for adjustable shelf fixing.

MULTI-PURPOSE-PANEL

CAN BE ADDED ON REQUEST
TO COMPLETE YOUR WORK BENCH

THE MODULAR BENCHES IN THE SYSTEM SERIES HAVE A MODULAR COMPARTMENT STRUCTURE THAT MAKES THEM FLEXIBLE IN THEIR COMPOSITION.
In addition to the solutions available in the catalogue, you can configure them with shelves, drawers and doors according to your production needs and department requirements, which makes of them the most versatile benches in our range.

CYLINDER SIDE CLOSURE

The side lock allows for the closure of all the drawers inserted in the same compartment. The system can be supplied in two heights:
- H 600 mm if all the compartment is filled with drawers
- H 150 mm if a 450 mm H door and the drawers are inserted in the compartment.

SUPPLIED AS STANDARD WITH 2 KEYS

ADJUSTABLE SHELVES

The adjustable shelf also acts as a bottom closure shelf and is available in two models: for the left-side compartments or for the right-side/middle compartments of each module.

96% = 75 kg
100% = 50 kg

VERTEBRATE BAR

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.

FLEXIBLE EXTENSION DRAWERS

CYLINDER CLOSURE

TRANSMISSION SYSTEM FROM THE CLOSURE CYLINDER TO THE HEAD OF THE VERTEBRATE BAR WITH STEEL WIRE WITH ELASTIC SHEATH AND LINEAR MOVEMENT.
The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

PUSH TO OPEN- INDIVIDUAL DRAWER OPENING

Compared to traditional systems that require additional components on the front, the opening of individual drawers is a feature integrated in the cylinder. To open the drawers just press the lock cylinder. The fewer components in a given mechanism, the less likely the risk of breakdowns.

FIXED AND ADJUSTABLE LEGS WITH WHEELS

The legs are made of sheet steel with holes at the top for fixing to the worktop and on the base plates for wheel mounting. They are available with a diameter of 125 mm and in a range of models suitable for any type of flooring. Height adjustable versions are also available, variable in height from 850 to 1250 mm through two 25 mm pitch extensions (adjustable by screw tightening). In the leg with swivel wheels a practical handle is provided for bench handling.

DRAWERS CABINET

Drawers are supplied with 87% plain extensibility on high-strength ball bearings. The perforated bottom and the slotted walls with 17 mm pitch allow for easy insertion and fastening (through screws) of the metal partitions. The individual drawer opening device prevents accidental opening during handling.

87% = 70 kg

FRONT HEIGHT 50 mm

87% = 50 kg

FIXED AND ADJUSTABLE LEGS WITH WHEELS

The legs are made of sheet steel with holes at the top for fixing to the worktop and on the base plates for wheel mounting. They are available with a diameter of 125 mm and in a range of models suitable for any type of flooring. Height adjustable versions are also available, variable in height from 850 to 1250 mm through two 25 mm pitch extensions (adjustable by screw tightening). In the leg with swivel wheels a practical handle is provided for bench handling.

NYLON WHEELS

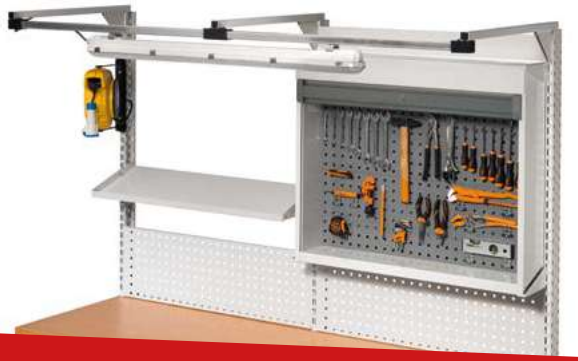
CYLINDER CLOSURE

The side lock allows for the closure of all the drawers inserted in the same compartment. The system can be supplied in two heights:
- H 600 mm if all the compartment is filled with drawers
- H 150 mm if a 450 mm H door and the drawers are inserted in the compartment.

SUPPLIED AS STANDARD WITH 2 KEYS

CONNECTING CROSS ELEMENT and MULTIPLEX BOTTOM SHELF

Built from sturdy sheet steel, bent and shaped, the connecting cross element acts as a spacer and stiffening element between the bench legs - making the mobile benches extremely strong during handling with heavy materials. The 25 mm thick multiplex bottom shelf can be applied to replace the cross piece or used at the same time.



MULTI-PURPOSE-PANEL

CAN BE ADDED ON REQUEST

STANDARD RUBBER WHEELS

DRAWER CABINETS

New, flexible extension guide with mechanical adjustment of the drawer rear stop in 3 different positions.

92% = 100 kg
96% = 75 kg
100% = 50 kg

VERTEBRATE BAR

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.

CYLINDER CLOSURE

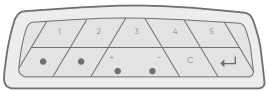
TRANSMISSION SYSTEM FROM THE CLOSURE CYLINDER TO THE HEAD OF THE VERTEBRATE BAR BY MENAS OF STEEL WIRE WITH ELASTIC SHEATH AND LINEAR MOVEMENT.
The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

PUSH TO OPEN- INDIVIDUAL DRAWER OPENING

Compared to traditional systems that require additional components on the front, the opening of individual drawers is a feature integrated in the cylinder. To open the drawers just press the lock cylinder. The fewer components in a given mechanism, the less likely the risk of breakdowns.

LOCK WITH DIGITAL CODE



In addition to the standard cylinder closure system, Fami has decided to add a digital code locking system (it can handle up to 10 users with 3 to 8 digit codes), which controls the opening and closing of the vertebrate bar. The event history can be downloaded by connecting the keypad to the PC with a cable. Up to 10 remote controls are available on request.

MULTIPLEX SHELF EDGES

Multiplex back upstand

Multiplex side upstand

The edging containment strips are made of beech multiplex and are fixed to the top with self-tapping screws. Their thickness is 12 mm and their height is 100 mm.
Practical and handy to contain materials during handling of the bench.

STANDARD RUBBER WHEELS

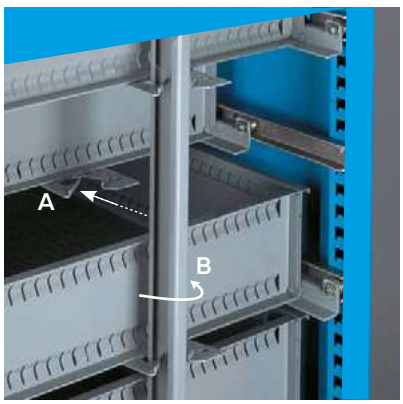
100% = 70 kg

DRAWERS CABINET

The drawers and the door are supplied with cylinder locks with 2 keys. The drawer, with high resistance sliding nylon bearings, is fitted with a stop to prevent it from accidentally falling during opening. Available in 3 different configurations.

ANTI-TILT ROD

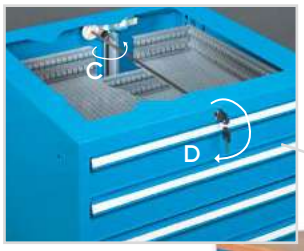
The closing bar acts as an anti-tilt system when the drawer is extended. The drawer rear hook (A) causes the rear bar (B) to rotate to its closed position. This prevents the operator from simultaneously opening multiple drawers, avoiding a dangerous weight shift to the outside.



CYLINDER CLOSURE

The cylinder closure is connected via a square section rod (C) to the rear closing assembly, consisting of a rotating element and of the anti-tilt rod. Turning the key (D) operates the cam system in the closure assembly that rotates the rod.

SUPPLIED AS STANDARD WITH 2 KEYS



The handle is applied to the cabinet side.

The doors are pre-set to be installed with either right-hand or left-hand opening. When the cabinet is provided with a door, both the cabinet lock and the door lock are provided with the same keys.

MULTIPLEX SHELF EDGES

The edging containment strips are made of beech multiplex and are fixed to the top with self-tapping screws. Their thickness is 12 mm and their height is 100 mm.
Practical and handy to contain materials during handling of the bench.

WINDER

ART.	
F BL 9601 01 07	

IP42 230V winder with 10 metres of cable 3x1,5 mm, 2 complete with a heavy duty flying socket 220-250V 16A 2P+E and a Schuko socket 220-250V 10A 2P+E.
The winder is fitted with a bracket for connection to the support columns with dual slots. Power output: with cable wound up 1200W - with cable unwound 1800W

BALANCER SET

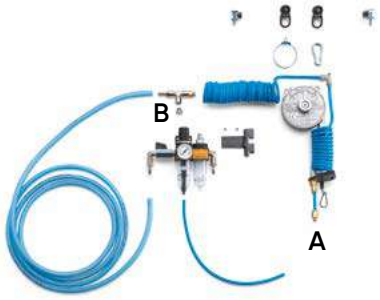
ART.	WITH BALANCER
F BL 9710 00 00	0,4 - 1 kg
F BL 9720 00 00	1 - 2 kg

The set includes: 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable

SUPPORT RUNNERS

ART.
R CMV 0034 00

The support runner is made up of 1 black plastic ring complete with bearings and 1 steel snap hook

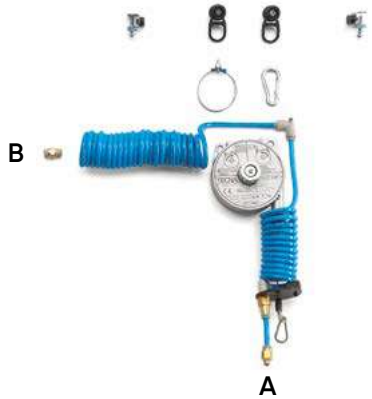


COMPRESSED AIR SET WITH BALANCER AND FILTER

ART.	WITH BALANCER
F BL 9710 03 00	0,4 - 1 kg
F BL 9720 03 00	1 - 2 kg

The set includes: 1 flexible cable Ø 10 mm, 1 T-shaped connector 1/4" with cap (B), 2 retainers, 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable, 1 universal tool coupling 1/4" (A), 1 spiral tube internal diameter 5.5 mm, 1 filter regulator unit with pressure gauge* which can be used at a maximum pressure of 10 bar, it has a capacity of about 9 litres per second (at point A) and 11 litres per second (at point B) at an operating pressure of 6.3 bar (the capacity can vary according to the technical characteristics of the compressed air supply to which the Fami system is connected). 1/4" unions, 1 tube internal diameter 5.5 mm to drain the filter.

*Filter regulator unit with pressure gauge and oiler on request



ADDITIONAL COMPRESSED AIR SET WITH BALANCER

ART.	WITH BALANCER
F BL 9710 02 00	0,4 - 1 kg
F BL 9720 02 00	1 - 2 kg

The set includes: 1 coupling 1/4" (B), 2 retainers, 2 support runners, 1 snap hook, 1 balancer with 1600 mm long steel cable, 1 universal tool coupling (A), 1 spiral tube internal diameter 5.5 mm.

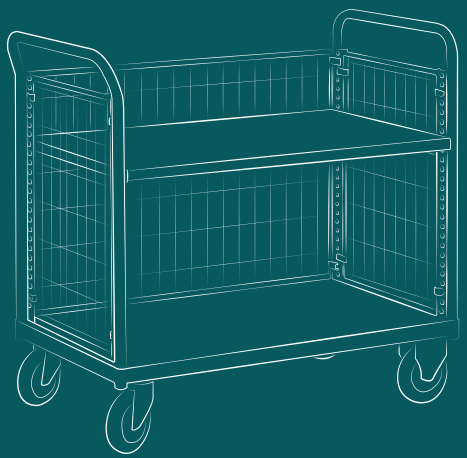
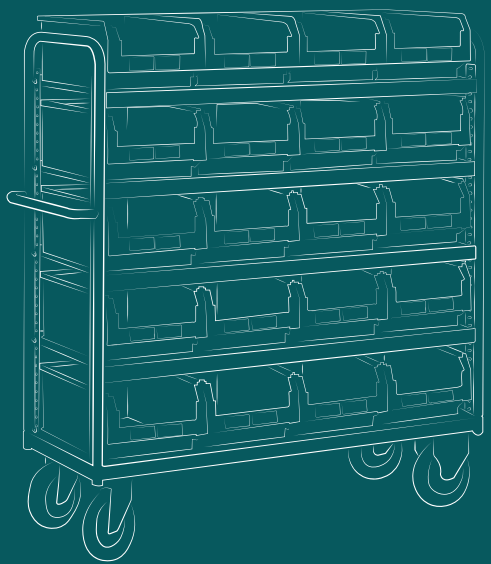
A WIDE RANGE OF CONFIGURATIONS ON WHEELS FOR SAFE LOGISTICS AND TRANSPORT APPLICATIONS





CLEVER-COMBI

TECHNICAL SPECIFICATIONS

1

The uprights are drilled to a 26 mm pitch for optimised shelf positioning and inclination.

2 Assembling the mesh sides is quick and easy, no screws required. This result has been achieved thanks to the special shaping of the slotted upright and the introduction of a clip, which allows for bolt-free assembling with 100% guaranteed sturdiness and reliability over time.

3 The assembling of the rear mesh panels is quick and easy thanks to the use of standardised mesh panels which are fixed to the slotted uprights with screws and clips. The combination of screws and clips allows for easy and solid fastening.

4 Thanks to the special shape of the upright and the use of a screw-type connection, coupling is precise, solid and reliable over time.

5

The trolleys are provided with a warning sticker on how to use the trolley and another sticker indicating the capacity.

7

The trolleys are supplied not assembled to save up to 50% on shipping costs.

OUR RAW MATERIALS

FIRST GRADE POLYPROPYLENE

First grade polypropylene is a non-toxic plastic material highly appreciated and used in the manufacturing and design industries for the production of the most diverse products, as it is odourless, resistant to solvents and acids, washable and sterilisable, resistant to moisture and not hygroscopic. Its chemical and mechanical behaviour make of polypropylene an ideal product to make boxes, crates, bins and other containers, designed for the handling and storage of goods.

PP	51 01	grey polypropylene	PP	51 02	green polypropylene
PP	51 03	red polypropylene	PP	51 04	blue polypropylene
PP	51 05	yellow polypropylene	PP	51 XB	turquoise polypropylene
PP	51 27	signal blue polypropylene	PP	51 IG	sapphire blue polypropylene
PP	59 27	signal blue polypropylene	PP	59 01	grey polypropylene

FOOD SAFE POLYPROPYLENE

Food compliant polypropylene is a material that complies with the current EU legislation that regulates the specifications of packaging and containers intended for contact with foodstuffs. This plastic material is very popular in the food industry - from the preparation and packaging stage all the way to product storage and shipment.

	59 00	white PP - food compliant

Boxes are manufactured in food-approvated plastic compliant with:

1 Italian Ministerial decree of 21 March 1973 and subsequent amendments and additions: Health regulations for packaging, receptacles and utensils intended to come into contact with foodstuffs or personal care products.

2 Italian Presidential Decree no. 777 of 23 August 1982 and subsequent amendments and additions: Implementing Directive 76/893/EEC relating to materials and articles intended to come into contact with foodstuffs.

3 Regulation (EC) no. 1935/2004 of the European Parliament and of the Council of 27 October 2004 on materials and articles intended to come into contact with food and repealing Directives 80/590/EEC and 89/109/EEC.

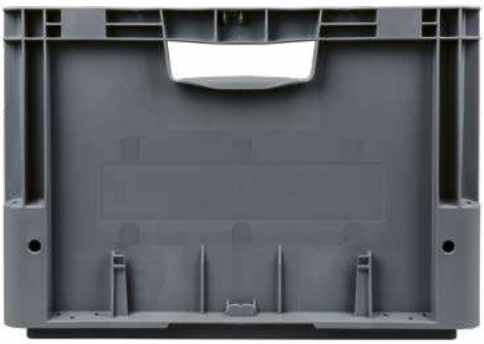
4 Commission Regulation (EC) No. 2023/2006 of 22 December 2006 on good manufacturing practice for materials and articles intended to come into contact with food.

5 Commission Regulation (EU) No. 10/2011 of 14 January 2011 on plastic materials and articles intended to come into contact with food (replacing and repealing Directive 2002/72/EC).

ECOGREEN POLYPROPYLENE

Ecogreen Polypropylene is an environment-friendly solution as it can give a new lease of life to recycled plastic obtained from waste-to-energy processing of post-consumer plastic.

54 01 grey ecogreen



POLYPROPYLENE **5A**

5A Polypropylene is a composite material obtained by mixing first grade polypropylene with a fraction of polypropylene obtained from selected post-industrial material. This raw material can guarantee high performance.

5A 01 grey regenerated

CONDUCTIVE POLYPROPYLENE - ESD

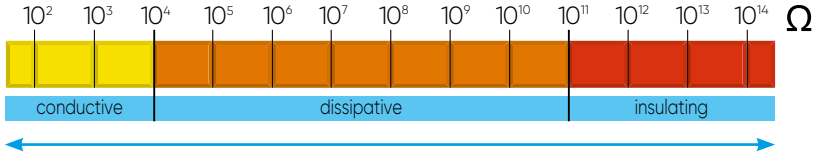
Conductive polypropylene is a top quality plastic material, perfectly suitable for ensuring protection from electrostatic discharges. Conductive polypropylene boxes can be used to safely store and handle sensitive electronic components.

52 07 black PP - ESD

TECHNICAL SPECIFICATIONS

STANDARD MATERIAL	Polypropylene copolymer (PPC)
ELECTROCONDUCTIVE ADDITIVE	Carbon black
COLOUR	Black
DENSITY, AT 23°C	1.04 g/cm³
VICAT SOFTENING TEMPERATURE	154° C ISO 306
TEMPERATURE OF USE	Permanent: approx. 80-100°C For a short time: approx. 100-120°C
SURFACE RESISTANCE	< 10^4 Ω cm (measured according to CEI EN 61340-2-3 at 20°C with a 5 cm² annular electrode).
SPECIFIC RESISTIVITY	10^4 Ω cm (measured according to CEI EN 61340-2-3 at 20°C with a 5 cm² annular electrode)
AGEING	No conductivity decrease (in 7 years of use) no migration of corrosive substances, excellent resistance to UV radiation.
RESISTANCE TO CHEMICALS	Excellent (according to the PP classification, generally valid)

CONDUCTIVITY SCALE



OUR RAW MATERIALS

POLYSTYRENE

Polystyrene is a transparent, hard and bright resin, used for the production of extensible drawers with tilting opening of the Practibox line, for RK dividers and for divider box lids. It is highly transparent, which makes the contents of drawers perfectly visible, and features excellent mechanical strength, making it a durable and reliable product over time.

PS **68 96** transparent polystyrene

ABS

ABS is the result of a successful combination between a resin and an elastomer, and owes its success to the excellent technical properties that characterise it. Outstandingly bright and with better surface aesthetics than other polymers, it is a rigid, resilient plastic material, with a high degree of resistance to scratches and impacts. It is used in the production of Practibox chests of drawers, which can be integrated in racks, in trolleys or fixed directly to walls.

ABS

materials test laboratory

Our laboratory carries out composition analyses, mechanical, thermal and functional tests on the materials used and on the structure of the boxes and containers that we manufacture. Over the years we have developed considerable problem solving expertise and optimisation of logistics processes, to supply service that is line with our customers' requirements.

production processes

A mixture of various "grains" and colours, heated up to obtain a homogeneous and plastic mixture, is placed inside the mould to acquire the desired shape and become a crate, or a finishing element, or a mechanical part. The process is easy to describe but likely to be affected by a countless variables - knowledgeably and passionately managed by Fami's experts. The presses and moulds, the core elements of our production facilities, are connected to each other through silos, sliding rollers, control stations, as well as technical and commercial input that make up the company's value chain. Before being put on the market, each product is tested and checked so that there are no imperfections; after this test, it is made available to the customer.

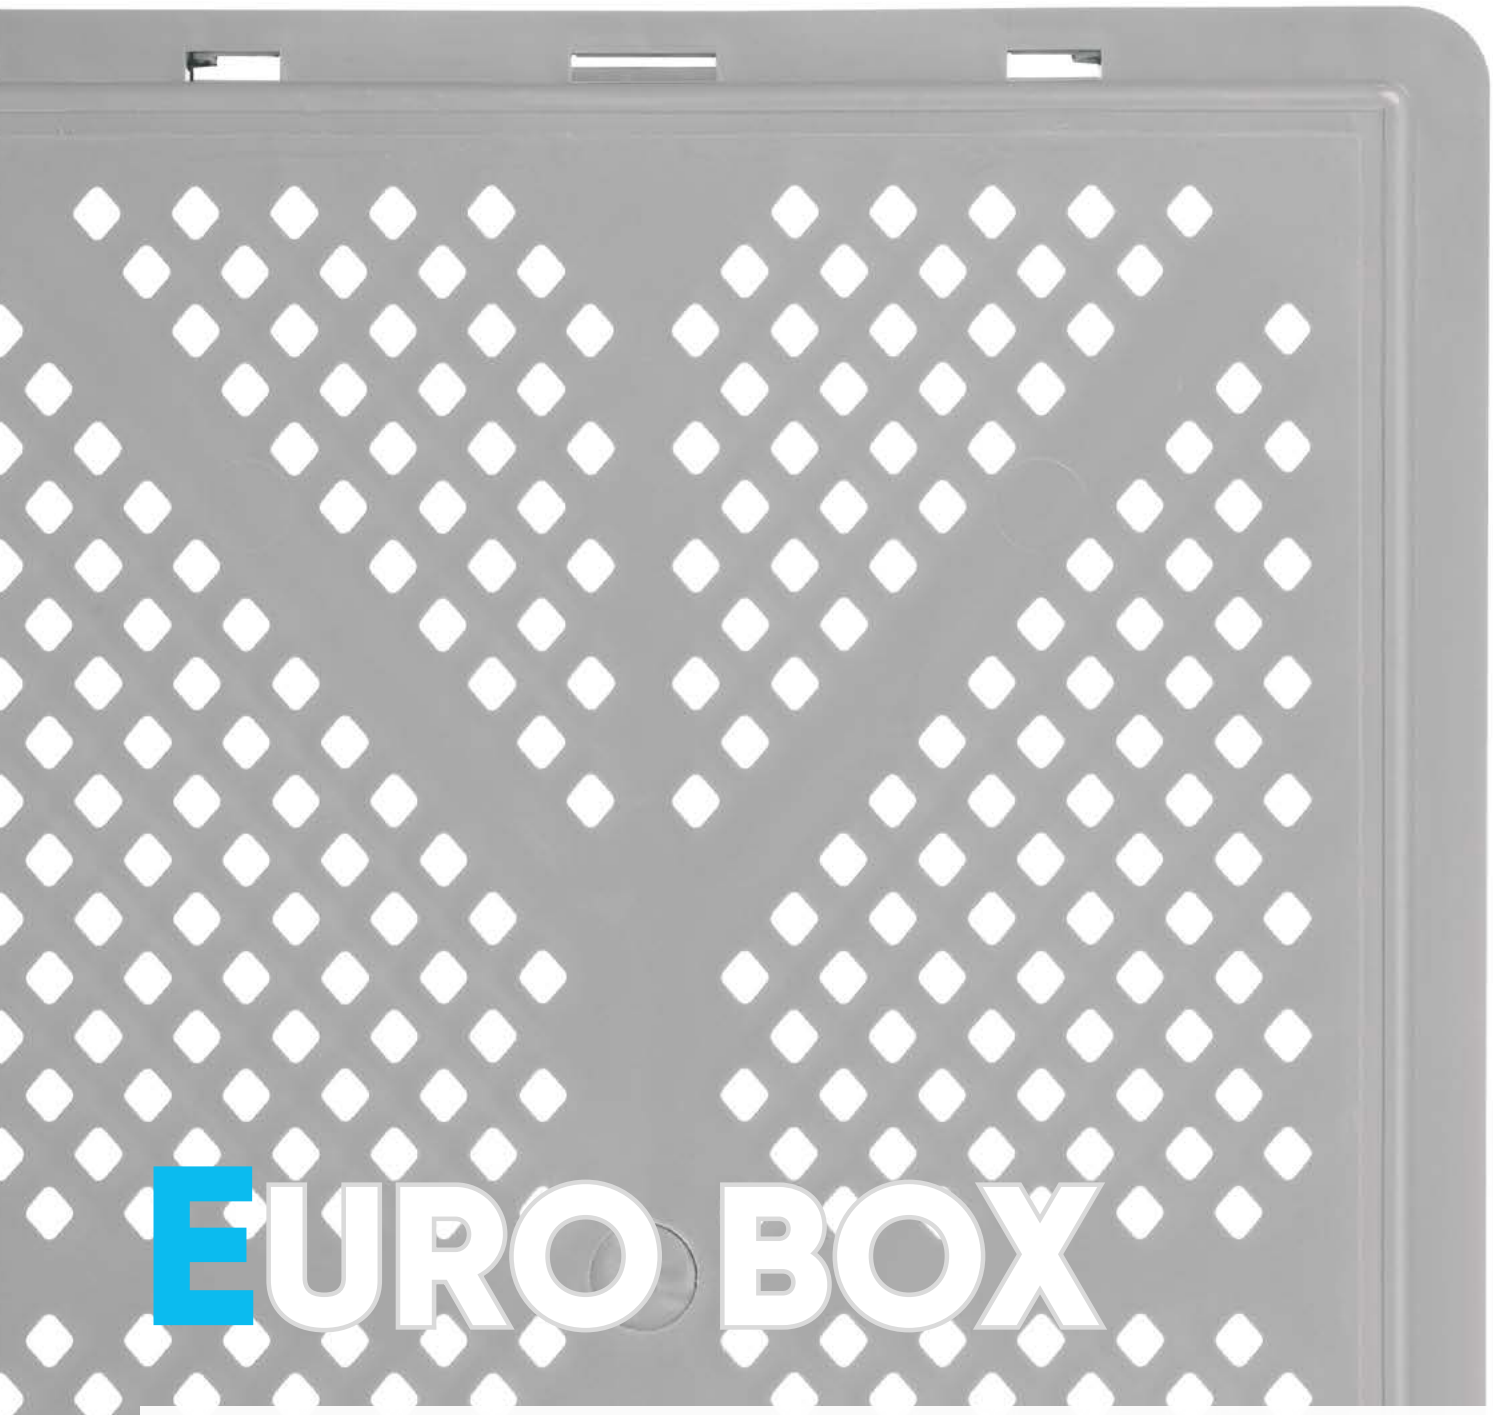
EURO BOX



EURO BOX

The Euro Box series containers, available in a variety of materials and sizes, are used in all sectors and ideally respond to both storage and distribution needs. Stackable with and without lids, they comply with euro-pallet dimensional requirements. Edges and reinforcements have been designed to give the containers a structure such as to make them resistant to even the heaviest loads. The containers' bottoms and walls can be either solid or perforated. The handles can be either open or closed. The different composition of these elements allows for various solutions and can be adapted to customised requirements.

EURO BOX LIGHT

The Euro Box Light series boxes have been designed and built for the most up-to-date storage and handling techniques concerning a wide variety of materials. Lightweight and handy, they are available in grey or turquoise polypropylene, in the food-safe and conductive versions. Unlike the Euro Box series, they are available with larger holes that allow for better ventilation and product visibility.

NESTABLE BOX

Made from grey polypropylene, the Nestable Box series stacking containers have a truncated cone shape: when fully loaded they can be stacked firmly and safely, when they are empty they can be stacked one inside the other with a reduction of 70% of their volume. For this reason they are used to exploit warehouse space and for transport, especially as regards transport with empty return journeys and wherever packing must occupy as small a space as possible.

HAND GRIP

The flush handles offer a safe and easy grip even for gloved hands.

PICKING BOX

Picking Box Series polypropylene containers are the ideal solution for any storage requirement - in warehouses, in workshops, and along assembly lines. They allow all contents to be always clearly visible and ready at your fingertips - making withdrawal extremely easy. These containers are stackable in a stable and safe manner and the ready availability of the material is ensured even when they are stacked.

BOTTOM

smooth bottom

A

ribbed bottom

B

45° ribbed bottom with cross bar

E

CROSS BAR

The containers are fitted with a cross bar fixed to the front of the container - the function of which is avoiding any deformation of the side walls in the event of large-volume loads and making the container easier to grab.

SIDE REINFORCEMENT

A side stiffener on the bottom allows containers to be stacked while ensuring maximum safety even under full load conditions.

LIFTING

Lifting and handling are made possible by practical handles for quick gripping even with gloved hands.

STORAGE BOX

The polypropylene containers from our Storage Box series meet any special material handling and storage need. They are easy to handle and lightweight, plus their smooth interior makes them easy to clean; in addition, they are built with sturdy edges for stacking strength and safety. Stackability, combined with high containment capacity, enables to make the most of the available space.

SIDE REINFORCEMENT

A side reinforcement on the bottom allows boxes to be stacked while ensuring maximum safety even under full load conditions.

RK BOX

Everything neatly arranged and clearly visible in a flexible and functional warehouse: this was the result that we achieved after we set out to design our RK Box storage polypropylene boxes and shelving. Available in ten different sizes to meet every need, the boxes are particularly suitable for spare parts dealers - thanks both to their resistance to oils and to their internal partitioning options.

SIDE WALLS

Made of first grade polypropylene, the RK Box boxes have walls reinforced by special ribs for impact resistance.

BOTTOM

Smooth bottom

HANDLES

A special handle, supplied on request, facilitates lifting and handling RK Box boxes.

MARKING

On request

LABELS

Equipped with label holders, available in different sizes proportionally to the size of the boxes to which they are applied.

DIVIDERS

Made of transparent polystyrene, bin dividers allow box internal space to be divided into several compartments.

RK BOX

RK Box boxes are ideally suitable for special RK Box racking systems: made of sheet steel, they have been designed according to modular criteria to meet multiple operational needs. In the upper part, the rack has two positioning wings to facilitate stacking, while a plinth can be inserted in the lower part. Shelving units of the same depth, or of decreasing depth, can be placed on top of each other. The shelves are fixed and have slots for inserting guides to ensure box sliding.

FRONT STOP

The racks can be installed on vans. In this case, it is advisable to use special galvanised steel stops to prevent the boxes from slipping off.

REAR STOP

Galvanised steel retainer that prevents the boxes from slipping off the shelves when they are pulled out.

VISUAL BOX

The Visual Box series chests of drawers consist of a grey ABS structure and transparent high strength polystyrene drawers.

Available in different models by depth and height, they all have a width of 600 mm which allows them to be stacked in a variety of combinations.

DRAWERS

The drawers, made of high strength transparent polystyrene, are housed in a special ABS container, designed to be fitted on Visual Box series shelves or trolleys or fixed to the wall with anchors.

STACKING

Available in different models by depth and height, Visual Box series chests of drawers all feature a width of 600 mm. Thanks to this feature, modules of the same depth and of decreasing depth can be stacked, allowing for a variety of combinations.

FRONTAL OPENING

Featuring a convenient tilting opening, the Visual Box series drawer units ensure optimal access to the contained product.

ORGANISATION

Equipped with a practical handle, the Visual Box series drawer units optimally respond to the most diverse needs.

RAW MATERIAL

PS — transparent polystyrene

ABS — grey

The Visual Box revolving rack consists of a 360° rotating base on which 4 Visual Box chests of drawers are fixed, available in 3 different heights.
Capacious, sturdy and practical, it is highly user-friendly both in roomy and in small environments.

THE SHELVING UNITS MUST BE FIXED TO THE FLOOR

VISUAL BOX

VERTICAL SYSTEM

The vertical system consists of a modular cabinet to be completed by inserting drawers and with Visual Box drawer units. The cabinet consists of a steel structure, specially shaped and strengthened to withstand heavy loads: it is supplied as standard with a single drawer opening device and must be fixed to the floor or a wall. The drawers slide on telescopic guides installed on ball bearings that guarantee easy opening even under full load conditions.

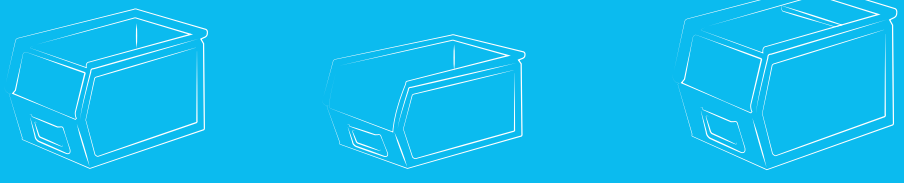
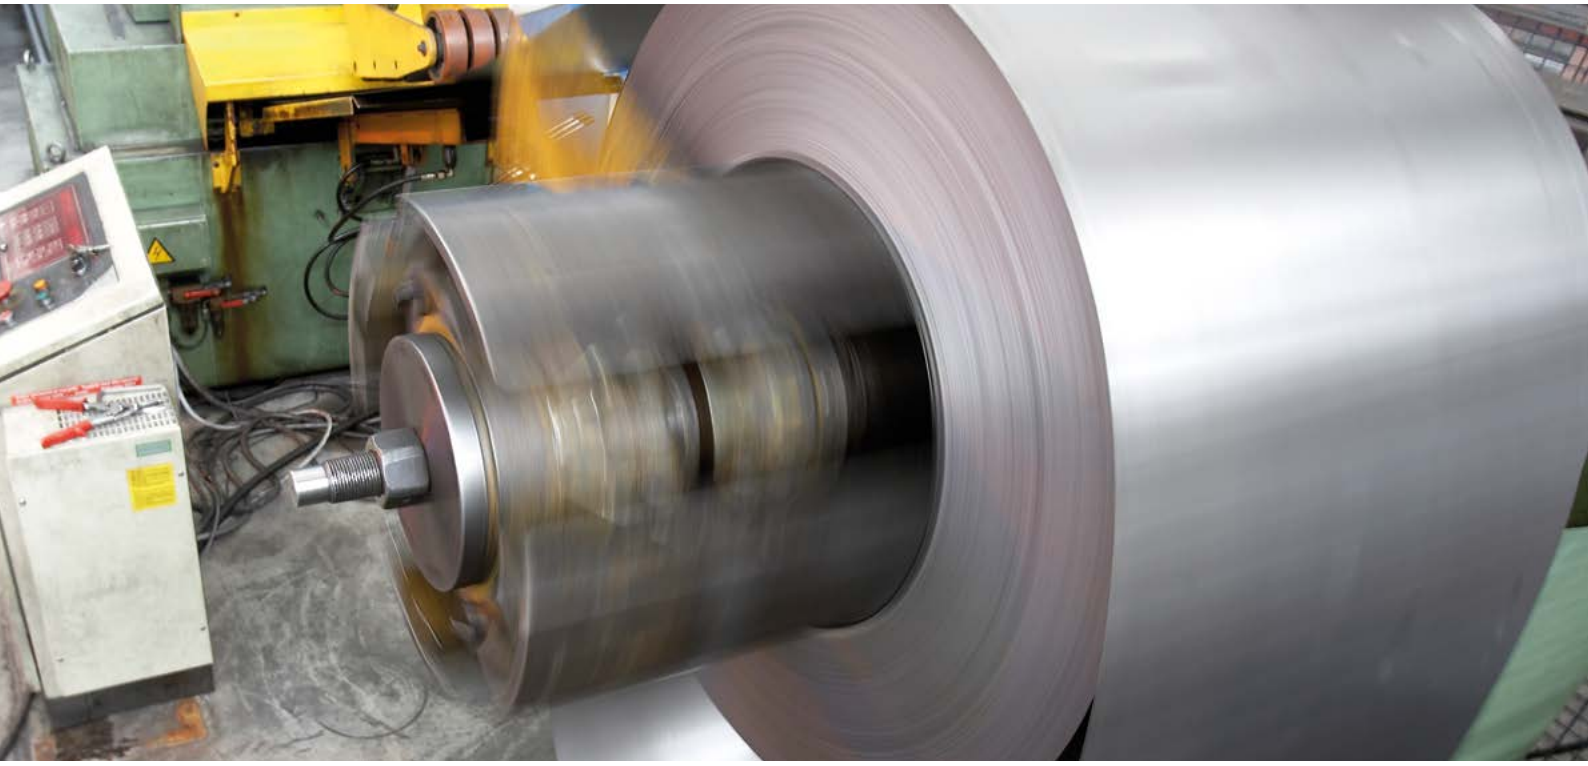
A WIDE RANGE OF MODELS FOR EVERY NEED, IN PAINTED OR GALVANISED STEEL PLATE



METAL



fami

TECHNICAL FEATURES

FAMI metal containers, bins and boxes are the ideal solution for the storage and handling of materials that require ready availability both in warehouses and in production and assembly workshops. Made of cold-rolled polished steel plate, they are reinforced with special ribs on the walls and on the bottom to increase their load strength and non-deformability in case of impacts.

Bins, crates and containers are easily handled manually thanks to practical handles with 90 degree locking and cross bars for lifting. For quick and easy lifting and handling of boxes and containers, practical trolleys are available to ensure easy handling also of fully loaded containers and lifting of stacks.

WITH SLIDE

WITH DOUBLE CROSS BARS

If heavy loads have to be stored, containers with slides and those with double load-bearing cross rods are available to make lifting and handling with lift trucks easier.

CONTAINERS, BINS AND BOXES

are stackable, so as to make the most of the available space in the warehouse and during transport and handling. The reinforced, raised edge ensures perfect adhesion in a stack.

METAL CONTAINERS

The metal containers can be fitted with label holders, to connect to the edge, or with relief printed load capacity plates to weld in the position requested by the custmer.

The insides of the containers can be divided into various compartments thanks to the practical dividers in painted sheet metal.

SHEET STEEL PALLETS

Made from painted sheet steel, these pallets are perfect for handling material with forklift trucks and feature greater load capacity and longer lifetime than traditional wooden pallets.

CONTAINERS
WITH ROLLER OPENING BOTTOMS

Lifted with a forklift truck via four handles welded to the top edge, they allow the contained material to be dumped by roller-operated bottom opening (87% opening). Opening takes place easily and safely via the lever located on the 800 mm side, while closure is obtained by means of a special device consisting of steel levers and rollers.

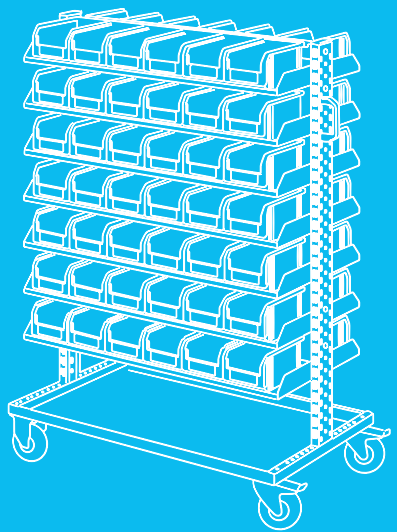
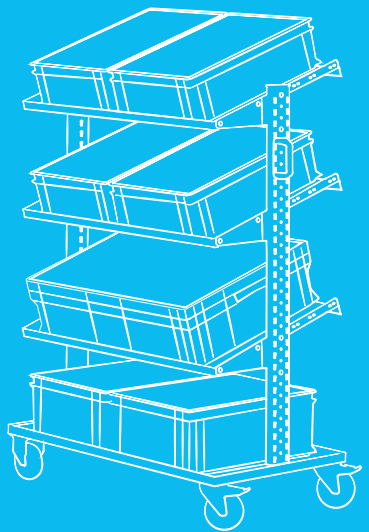
WELL ORGANISED MATERIAL ALWAYS CONVENIENTLY AT HAND, IN LINE WITH OUR STRATEGY

BASED ON "LEAN PRODUCTION"





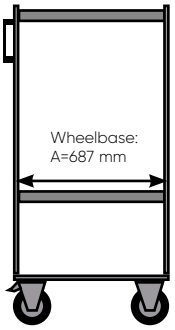
SMART

TECHNICAL SPECIFICATIONS

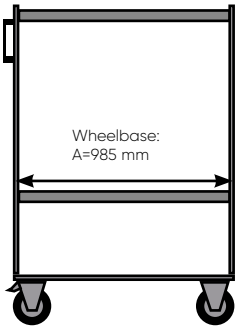
In addition to the standard structure consisting of uprights, shelves and wheels, the modular nature of the Smart series trolley offers endless customisable configurations with tilting shelves, boxes and containers of various sizes, shutter cabinets and tool holder perforated panels.

WIDTH

The Smart series trolley is available with height 1430 and 2 different widths:
-Pitch 687 mm for Smart 073 trolleys
-Pitch 985 mm for Smart 101-102-103 trolleys



SMART TROLLEYS 073



SMART TROLLEYS 101
SMART TROLLEYS 103
SMART TROLLEYS 102

SHELVES

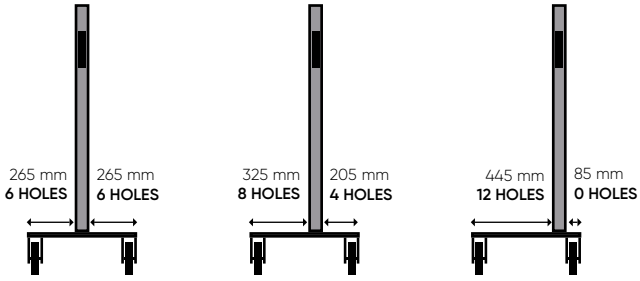
The tilting shelves for Smart trolleys with 955 mm length, 985 mm pitch, can be of 4 different depths (220-320-420-600).
The tilting shelf for Smart trolleys with 657 mm length, 687 mm pitch, can be of 2 different depths (220-420).
In addition to the tilting shelves, the trolley can also be configured with fixed shelves for containers - both with different depths.

tilting shelves

fixed shelves

ADJUSTMENTS

The perforated standard cross bar allows the uprights positioning to be adjusted and different types of boxes to be added; maximised adjustment flexibility for box insertion - from the smallest to the largest.



ACCESSORIES

To make the best use of trolley space, accessories such as the perforated panels, shutter closure cabinets, VISUAL BOX bins and the stiffening cross bars are optionally available.

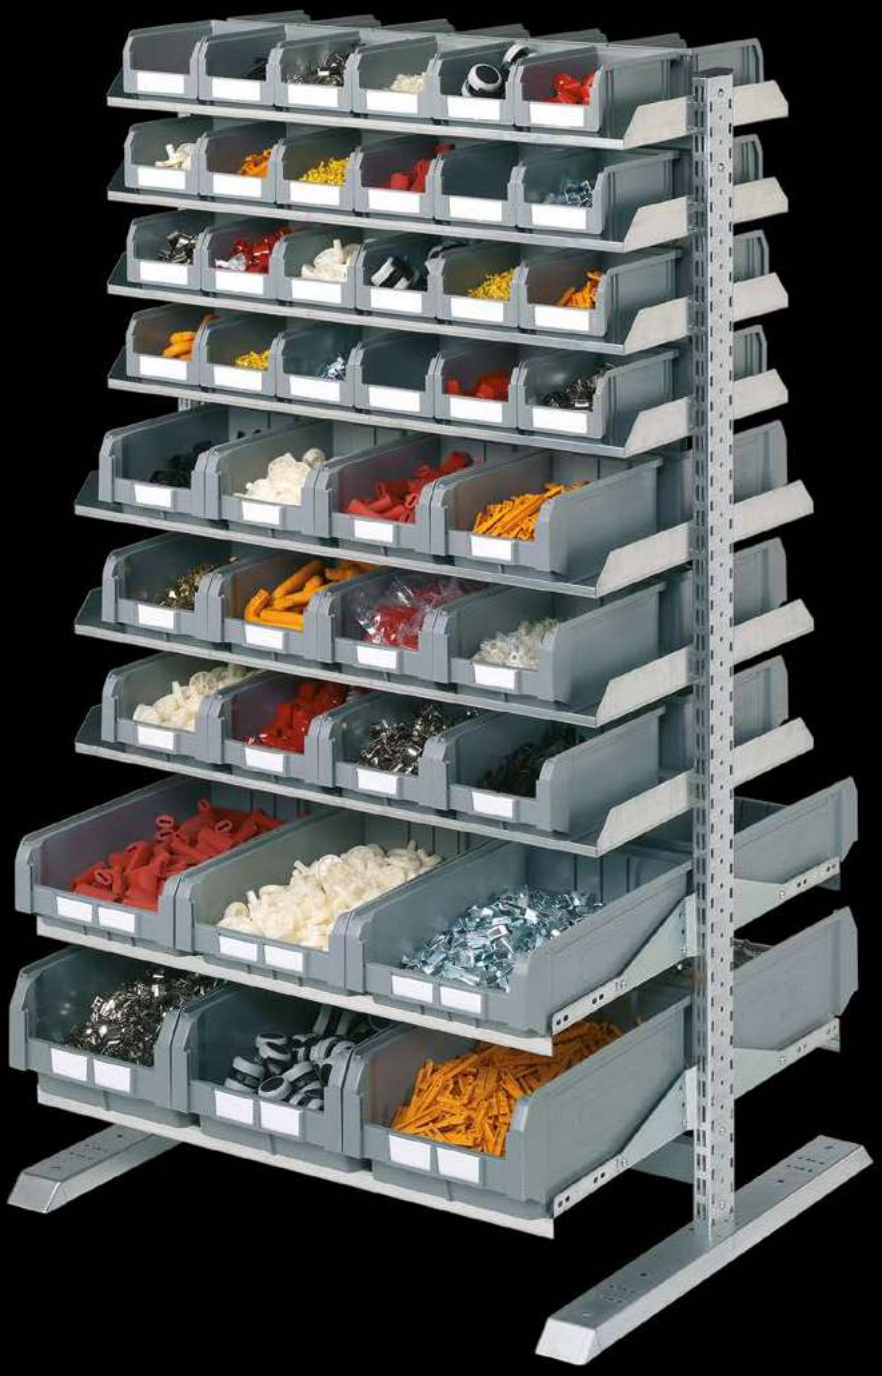
SHELVES FOR SMALL AND LARGE CONTAINERS NOT JUST SHELVES BUT DIVERSIFIED ACCESSORIES TO TURN THEM INTO TOOL HOLDER WALLS



SLICK

TECHNICAL SPECIFICATIONS

By integrating Slick series shelves in standard structures consisting of shelves, boxes, bins, containers and accessories, you can create a number of exclusive customised variations.

FRAME

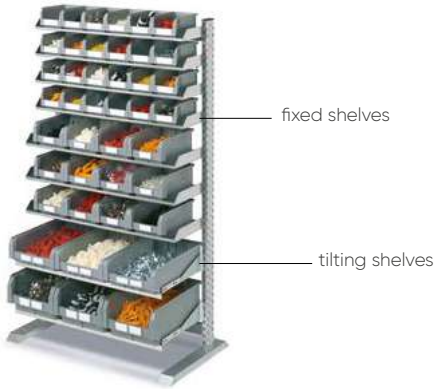
The Slick series racking unit is available in height 1817 h in two different version: with the two-sided standard frame with cross piece (shelves can be added on both sides) and with single-sided frame with cross piece (shelves can only be added along the foot side).

DOUBLE SIDED BASE FRAME WITH CROSS BRACING

SINGLE SIDED BASE FRAME WITH CROSS BRACING

SHELVES

The tilting shelves for Slick shelving systems with 955 mm length, 985 mm pitch can be of 4 different depths (220 - 320 - 420 - 600 mm).
In addition to the tilting shelves, the trolley can also be configured with fixed shelves for containers - both with different depths.



CONTAINERS

The standard perforated cross bar allows for adjustment of the uprights and insertion of different types of bins and containers PICKING BOX mes. 1/2/3/3A2/4/4A2 and containers series EURO BOX.

PICKING BOX

EURO BOX

ACCESSORIES

To make the best use of the shelving space, accessories such as the perforated panels used for hooking industrial tools and non-perforated panels on which to hang magnets, shutter cabinets, outlet boxes and cable ducts with wired outlets are optionally available.

MODULAR STRUCTURE FOR CONTAINERS AND BOXES SERIES:

EURO BOX, EURO BOX LIGHT, PICKING BOX, STORAGE BOX

SYSTEM TR

TECHNICAL SPECIFICATIONS

Suitable for insertion of EURO BOX, EURO BOX LIGHT, PICKING BOX and STORAGE BOX series PP boxes/containers and Storage Steel iron containers, the F TR series shelving is available in two different heights:

-1010 mm

-2010 mm

The pair of guides supporting the container is height-adjustable, has a maximum capacity of 50 kg and allows the simultaneous use of containers of the same size but with different heights.

Each span capacity is 250 kg. The system modular construction allows for the expansion of existing systems at any time.

STRENGTHENING TOP SHELVES

The shelves are fixed to the top part of each span and, in addition to reinforcing the shelving, also act as dust covers.

PAIR OF GUIDES

The pair of guides is designed to ensure that the box sliders are fixed to the uprights and secured with the special clip. Height-adjustable.

CAPACITY 50 kg

SIDE PANELS

The sides are supplied pre-assembled, with 25 mm pitch side slots, and are equipped with foot supports for fixing to the floor.

SPAN CAPACITY 250 kg

PAIR OF STRENGTHENING SOCKETS

The sockets are fastened with four self-tapping screws to the sides of the side panels to improve the structure stability.

STORAGE DOMINO

TECHNICAL SPECIFICATIONS

The remarkable experience gained in many years of activity in the warehousing and logistics business has led us to develop the DOMINO container holder shelves. They are stackable and allow proper storage structures to be built - with customised solutions that can be developed in height and width as needed.

They are designed to accomodate 4 sizes of containers, with sturdy sheet steel profiles, to ensure outstanding strength even under full load conditions. The stackable and modular construction of the shelves makes it possible to create storage facilities that can be altered at any time according to requirements.

Courtesy of Vimar S.p.A.

DUST COVER AND WORKTOP

The application of the dust cover and the worktop not only allows for extra material protection but it also helps create handy, convenient workstations for materials distribution.

PLINTH

The plinth raises the shelf off the ground by 85 mm, isolates it from the floor and prevents the bottom row of containers from touching it as they are pulled out.

CONTAINERS

Individual containers are pulled out quickly and easily, and a special hook, located frontally with respect to the guides, prevents accidental complete removal.

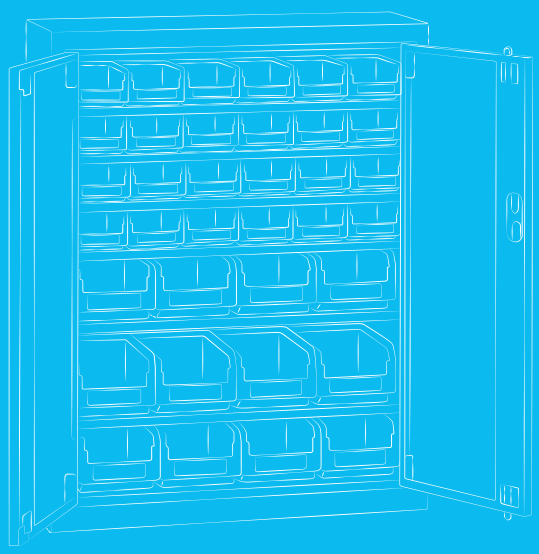
HIGH-CAPACITY STORAGE SOLUTIONS, CUSTOMISABLE WITH DOORS



PERFOM AK

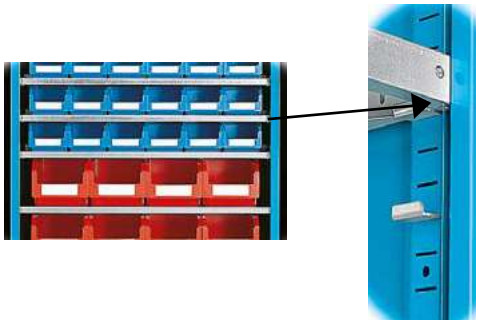
TECHNICAL SPECIFICATIONS

FAMI container holder cabinets are ideal solutions for storing various small items and parts used in shopping areas, warehouses and laboratories.
They consist of a polished steel structure and removable shelves that are inserted in variable numbers depending on the most suitable application solution.
The shelves can accommodate metal and polypropylene containers in sizes 1 or 2. These cabinets are supplied in “without door” or “with door” versions with keylock.

FAMI cabinets are ideally designed for housing metal and polypropylene containers.

ADJUSTABLE SHELVES

The cabinet space can be organised by using handy adjustable height shelves with 25 mm pitch, which can be inserted in variable numbers according to requirements.



CONTAINERS

The polypropylene containers have been designed to respond rationally to multiple material storage and handling needs.

When mes.1 containers are placed in the cabinet, a stop is fitted to the shelf to prevent containers from moving too far deep into the cabinet.

Mes. 1
dim. 160/140x95x75 mm H

Mes. 2
dim. 230/200x140x130 mm H

SAFETY

For safety purposes, FAMI container holder cabinets must be fixed to the floor or to the wall.

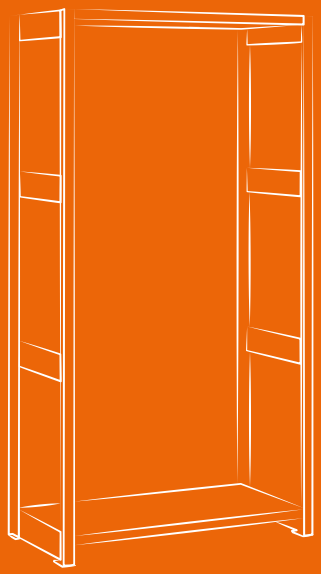
INTERLOCKED FITTING

WIDE RANGE OF ACCESSORIES

EACH SHELF FROM 100 TO 400 kg CAPACITY



Courtesy of Animo S.p.A.

SYSTEM ST

TECHNICAL SPECIFICATIONS

The F ST series racking systems have a modular structure ensuring easy installation: side panels, side walls, middle walls and rear walls have an interlocking design for easy fitting together without any screws.
The shelves come with 4 hooks and have a capacity range varying from 100 to 400 kg. This type of shelving is pre-set to be turned into cabinets by adding hinged or sliding doors, while vertical dividers, partitions, strips and (87%) plain and (100%) telescopic extension drawers can be used to create a well organised warehouse. Several accessories are available according to requirements.

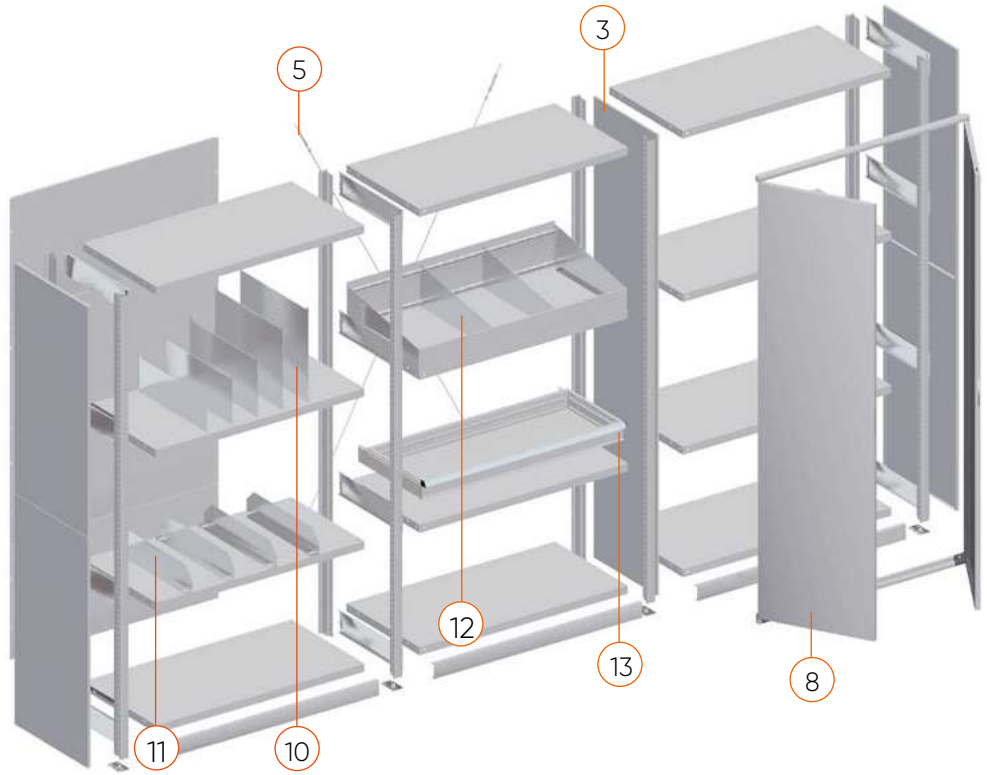
11	partitions
12	rear and front edge strips trapezoidal dividers
13	drawers



SHELVING SIDES

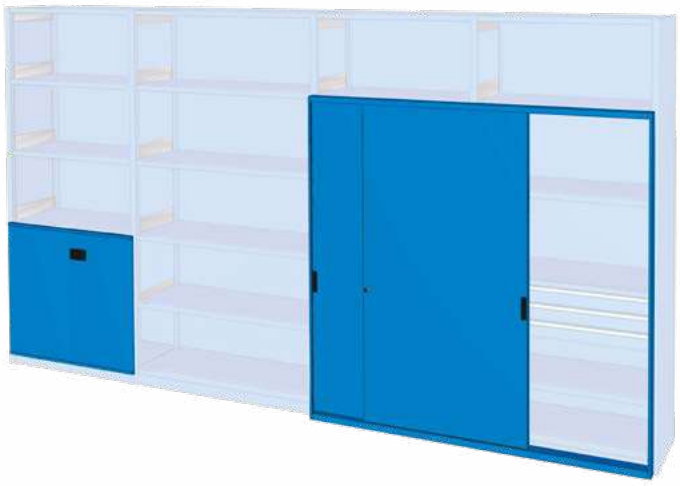
The side panels of F ST racks are installed quickly and easily through special galvanised cross pieces and without the use of screws.

SIDE, MIDDLE AND REAR WALL PANELS

Side, middle and rear wall panels are assembled by interlocked fitting without the use of screws, forming enclosed compartments.

SLIDING OR HINGED DOORS

Doors are used to protect the shelved goods from impacts and dust. Both types of door are equipped with a security lock and two keys.



ACCESSORIES

To make the best use of the available shelving space, accessories can be added such as: dividers, separators, partitions and edge strips, supplied with a galvanised finish.

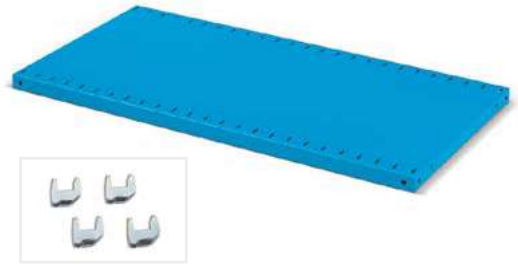
SLOTTED SHELVES

These shelves are slotted to a 40.5 mm pitch to allow for the insertion of vertical dividers or partitioning elements. On the long sides they feature a special moulding to enhance the sturdy construction of the shelves. By inserting stiffeners, which can be applied without screws, the shelf capacity can be increased.



Supplied with 4 hooks

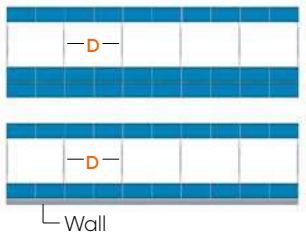
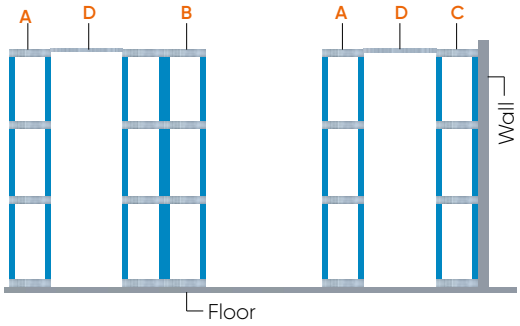
ART.	dim. mm	kg		
F ST 7850 00 07	990x500	30	100%	

Colour: black RAL 9005
The frames are only suitable for span lengths of 1000 mm and depths of 500 mm.

CONNECTING CROSS BARS BETWEEN SHELVES





A	Side panel fixing via a cross bar.
B	Double side panel with floor fixing.
C	Single side panel with wall fixing.
D	Top connecting cross bar.

- EXTERNAL SIDE WALLS MUST ALWAYS BE CONNECTED
- INTERNAL SIDE WALLS MUST BE CONNECTED EVERY OTHER BAY.

The connecting cross bar is used for side panels that must be secured but cannot be secured to the wall itself. In this case, the side panel must be connected to a double wall with floor fixing or a fixed wall panel.

AISLES:

If, by installing the shelving system, passageways or aisles adjacent to the shelving system are created, the shelving system must be closed with metal sheet panels or mesh panels on all sides not used for picking up material, and the passageways or aisles must have the following widths:

- Aisles used for manually picking or placing material from or on to the shelves without drawers and without the use of hand-pushed trolleys: minimum width of 800 mm.

- Aisles used for picking or placing material by means of hand-pushed trolleys: with or without drawers in the racking system: minimum width 1250 mm.

- Aisles used as staff passageways: minimum width 1250 mm.

The aisles used for picking and/or storing materials may not be used as staff passageways. For passageways used to drive motor-operated trucks, please contact FAMI for information.

WARNING: If double racking units are used, rear closure panels or mesh panels or a board must be fitted between the two, so that during material storing on one side of the rack, there is no danger of accidentally pushing material stored on the other side of the racking system.

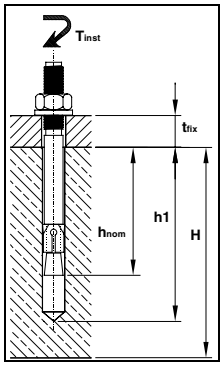
SAFETY

FLOOR SUPPORT PLATE

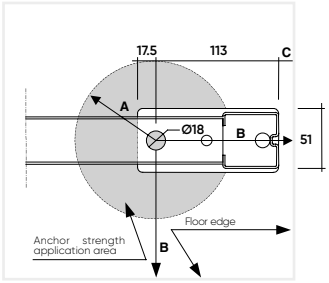
The support plate is designed to distribute the pressure applied on the floor by the Side PANEL. A technical data sheet supplied by FAMI is useful to check the suitability of the floor intended for racking system installation.

recommended anchor strength	5,6 kN
anchor diameter	Ø10 mm
concrete hole diameter	Ø10 mm
minimum hole depth	h_1 70 mm
minimum installation depth	h_{nom} 50 mm
max adjustable thickness	t_{fix} 20 mm
max tightening torque	T_{inst} 25 NM

min floor thickness for anchor plug fixing*	H: 100 mm
min anchor distance from the edge of the floor	B: 50 mm
anchor strength application area**	A: 75 mm
min upright distance from the edge of the floor	C: 0 mm



* The floor on which the racking system rests must be checked in terms of suitability for withstanding the pressure and the puncturing (drilling) stress applied by the shelving system itself and the pulling strength exerted by the anchor.
**The area must not be submitted to any other force.



TECHNICAL SPECIFICATIONS

The new SYSTEM SR-MASTER racks combine the advantages of a shelving unit with the advanced technology and uniqueness of a Master tool storage cabinet to offer innovative, high performance, modular logistics solutions, safe and personalised, with exclusive versions designed for the industrial storage equipment market.

FRONT HANDLE

SIDE

Made of sectional steel, it features slots to a 25 mm pitch on both upright frames. The elements that compose it - uprights, connecting cross bars and feet - are welded together and this allows for a capacity of up to 5,500 kg per bay span.

SIDE, MIDDLE AND REAR WALLS

The side, middle and rear walls are made of sheet plate, joined together to form closed compartments.

ACCESSORIES

PARTITIONS

The partitions are inserted in the slots provided in the shelves to a pitch of 40.5 mm. They have a height ranging from 100 to 200 mm and galvanised versions only are supplied. Ideally suitable for organising and optimising space on the shelf.

BUSH HOLDER FRAMES

Useful for storing NC tools, they can be placed inside drawers or installed between upright frames in a hanging configuration. Must-have accessories for CNC machines, they protect from impacts and dust, organise the available space and optimise product withdrawal time.

PARTITIONING MATERIAL

Longitudinal, transversal dividers, with 2-3-4 channels and divider boxes allow the drawer space to be divided in a rational way and according to specific operator needs.

FLEXIBLE EXTENSION

New, flexible extension guide with mechanical adjustment of the extensible drawer/shelf rear stop in 3 different positions. It allows 3 different capacities to be obtained: 50, 75, 100 kg.
Patented opening system allowing the user to customise extension and load capacity.

syFLEX

Patented opening system allowing the user to customise extension and load capacity.

92% = 100 kg
96% = 75 kg
100% = 50 kg

TELESCOPIC EXTENSION

New telescopic extension guide (100% extensibility) guaranteeing a capacity of 200 kg in the 10 different dimensions available for the Master cabinet.

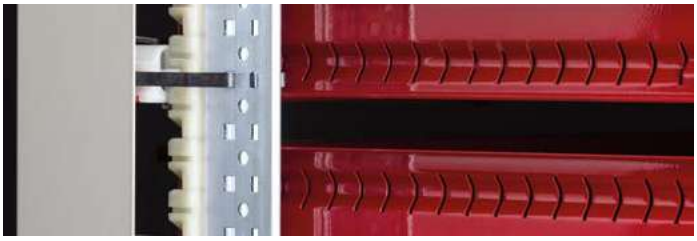
EXTENSIBLE DRAWERS/SHELVES

The extensible drawers/shelves of the Master series can be independently fitted with both flexible and telescopic extension guides.

VERTEBRATE BAR

THE SYSTEM'S HEART AND BRAINS

The bar is an aluminium profile section that is always fixed and never rotates. The closing movement is obtained via blocks that move vertically - driven by one of the basic forces of physics: gravity. The simpler the movement, the less likely the possible breaks. Bar locking is obtained via a locking bolt system provided on the bar head.



ADJUSTABLE SHELVES, STRENGTHENING SHELVES/LOCK SHELVES

The height adjustable middle shelves, supported by 4 hooks, are available in slotted versions, to contain partitions, with capacity ranging between 100 and 200 kg, and in non-slotted versions with capacity ranging between 70 and 150 kg.

The strengthening shelves, fixed with screws to the upright frames, are the "supporting columns" of the shelving system and vary in number (2-3) in relation to height. 250 kg capacity.

The lock shelves, which perform the same load-bearing function as the strengthening shelves, are designed to contain the lock with cylinder or the numerical code lock and support the vertebrate bar. 150 kg capacity

SLIDING DOORS

They are made of sheet steel specially shaped to ensure solidity, with a footprint depth of 50 mm.
Doors are used to protect the shelved goods from impacts and dust. They are supplied with cylinder locks with two keys.

ROLLER SHUTTER

The roller shutter doors are made of grey plastic material with a steel sheet handle and an integrated cylinder lock. Ideal for small spaces, where it is not possible to use hinged doors, they move along the uprights on vertical guides.

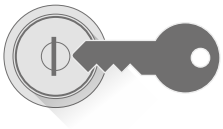
HINGED DOORS

Hinged doors are made of sturdy, specially shaped steel sheet, with a footprint depth of 25 mm. The 3-point closure ensures high security against break-ins. Available with cylinder lock and two keys or numerical code lock.

VERTICAL DRAWERS

The vertical drawers, with a capacity of 400 kg, are suitable for containing both heavy materials, such as broaches, and miscellaneous materials, such as tools, eyebolts, or ropes, to be arranged on practical perforated panels

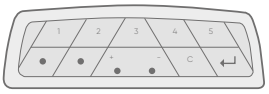
CYLINDER CLOSURE



Transmission system from the closure cylinder to the head of the vertebrate bar with steel wire, with elastic sheath and linear movement.
The cylinder closure lock is divided into 23 different series: each series has keys numbered from 1 to 160, for a total of 3,680 different combinations.

SUPPLIED AS STANDARD WITH 2 KEYS

LOCK WITH DIGITAL CODE



In addition to the standard cylinder closure, Fami decided to add a CODE lock to its closures. The numerical code lock controls the opening and closing of the vertebrate bar. It can manage up to 10 users with 3 to 8 digits numerical codes. The event history can be downloaded by connecting the keypad to the PC with a cable. Up to 10 remote controls are available on request.

EXTENSIBLE SHELF RACKING SYSTEM FOR HEAVY GOODS, IDEAL DESIGN FOR PICKING STORED GOODS WITH AN OVERHEAD CRANE

1247

Courtesy of Vimar S.p.A.

SYSTEM AR

TECHNICAL SPECIFICATIONS

The F AR shelving system, thanks to its extensible shelves, is especially suitable for storing very heavy material (moulds, engines etc.), which can be handled in complete safety by using an overhead crane and a lift truck. The shelves can have plain or telescopic extension, and a capacity ranging between 800 and 1000 kg.

Courtesy of Meccanostampi S.r.l

SHELVING SIDES

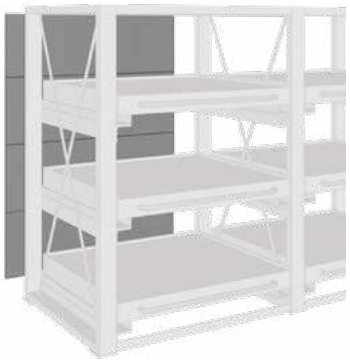
Made of sectional steel, they have slots to a 50 mm pitch on both sides.
The two uprights are connected to each other by two horizontal cross bars and a cross piece, forming a sturdy side wall. The sides are equipped with steel plates for floor fixing.

SLIDING DOORS

They are made of sheet steel specially shaped to improve solidity.
Doors are used to protect the shelved goods from impacts and dust. Each pair of sliding doors covers two shelving span lengths and has a cylinder lock with two keys.

SIDE AND REAR WALL PANELS

The side and rear walls are fixed with screws to the structure and, when used together, can form enclosed compartments. In addition, the rear walls do not require the fitting of any cross pieces.



SINGLE OPENING DEVICE FOR EXTENSIBLE SHELVES

For safety purposes, each extensible shelf must be opened individually. The device consists of a rod to be installed on the side wall (one for each span) with a hook to be applied to each extensible shelf. Opening only one shelf at a time avoids dangerous shifting of unsecured heavy loads, which might overturn the structure.

EXTENSIBLE SHELF LOCKING HOOK

A hook located on the front of the side walls allows the shelf to be locked in the opening and closing phases. In the opening phase, locking the shelf allows any material to be taken in complete safety.

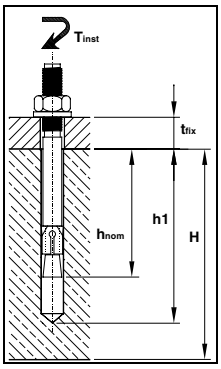
plain shelf locking hook

telescopic shelf locking hook

FLOOR SUPPORT PLATE

The support plate is designed to distribute the pressure applied on the floor by the side wall. A technical data sheet supplied by FAMI is useful to check the suitability of the floor intended for racking system installation.

The support plate is provided with a hole for plate anchoring to the floor by means of standard anchor bolts. This operation is necessary to ensure shelf safety.



*The floor on which the racking system rests must be checked in terms of suitability for withstanding the pressure and the puncturing (drilling) stress applied by the shelving system itself and the pulling strength exerted by the anchor.

**The area must not be submitted to any other force.

LOCKING HOOK

7

ART.
The hook is supplied as standard equipment with the extensible shelf

Single opening

The "AR" series shelving unit must be fitted with the single opening device for extensible shelves. This device allows one shelf at a time to be pulled out and consists of a rod of the same height as the side wall and locking hooks, which must be screwed into the rod to match the extensible shelves. One rod for each span and one hook for each extensible shelf are required (the hook is supplied as standard with the extensible shelf.)
